SURVEY

OF

CURRENT BUSINESS

UNITED STATES
DEPARTMENT OF COMMERCE
BUREAU OF FOREIGN AND DOMESTIC COMMERCE
WASHINGTON

VOLUME 17

NUMBER 8

Manufacturers

distributed one-fourth of their total product to industrial and other large users in 1935 . . . 23 percent went to wholesalers and jobbers, 19 percent to retailers, and 17 percent to wholesale branches.

Approximately two-thirds of all reporting manufacturers sold exclusively through one major channel . . . nearly one-fourth of the plants sold directly to household consumers. Distribution expenses represented 9.4 percent of sales but was as high as 15 percent for one industry group.

These facts are from the "Distribution of Manufacturers' Sales", one of the reports issued as a result of the 1935 Census of Business. A summary of this report is presented in the article on page 12.

Subscription price of the monthly and weekly issues of the SURVEY OF CURRENT BUSINESS is \$1.50 a year. Single-copy price: Monthly, 10 cents; weekly, 5 cents. Foreign subscriptions, \$3. Price of the 1936 Supplement is 35 cents. Make remittances only to Superintendent of Documents, Washington, D. C.

Business Indicators

1923-25=100, except as noted

Business Situation Summarized

BUSINESS activity has been maintained at a relatively favorable rate through July, the recent decline having reflected principally seasonal influences. Since seasonal tendencies were overcome a year ago by the strong cyclical expansion then under way and by the stimulus afforded as a result of the payment by the Government of the adjusted compensation certificates held by war veterans, relative gains over a year ago narrowed in June and July.

The movement of the seasonally adjusted index of industrial output during June and July has been influenced to a considerable extent by the fluctuations in the iron and steel industry. With the termination at the end of June of the industrial dispute which tied up production facilities of an important sector of the industry, the output of steel rose sharply. Automobile production declined in June, after seasonal adjustment, and receded further in July. Declines in activity have occurred also in some other important metal consuming industries but in others—machinery and railroad equipment, for example—manufacturing operations have been well sustained. Lumber output has increased, although the use by wood-consuming industries has not kept pace recently with production, judging by the shipments from the mills. Among the consumer-goods industries the June high light was the rate of activity in the petroleum refining and

textile industries. Refinery operations remained high in July, but the weekly estimates of cotton consumption indicated some moderation of textile mill activity.

The number of persons at work in the manufacturing industries dropped more than seasonally in June, partly due to labor disputes. The number of persons involved in disputes during April, May, and June was higher than in the earlier months of the year, but this number declined in July. It is worthy of note that the workers involved in labor disputes in the first 6 months of the year averaged less than 1 percent of the total number engaged in nonagricultural pursuits. Furthermore, these individuals were idle for a period of less than 10 days on the average, or little more than one-third of a month each.

Retail sales of general merchandise have held at a fairly even pace, after allowance for the normal seasonal decline. Trade in farm areas has been strengthened by the favorable prospects for this year's harvest, the benefits of which are flowing to farmers as the crop movement gets under way.

After 3 months of declining markets, stock prices moved sharply higher in July, reflecting the relatively favorable pace of summer business, crop prospects, the earnings reports covering the second quarter, and the reappraisal of the labor outlook.

Graphic Comparison of Principal Data

Commodity Prices

THE recession in the Bureau of Labor Statistics' weekly combined index of 784 commodity wholesale price series, which continued through nearly all of the second quarter, was checked in the latter part of June by an advance which extended through the first half of July. The rise of the combined index during the first quarter of 1937 had been the result of substantial advances in the indexes of all three of the component economic classes—finished products, raw materials, and semimanufactures—but the downward movement during the second quarter was due to declines in the last two classes, and in spite of a slight advance in prices of finished products.

Although the index of "all commodities other than farm products" moved almost horizontally throughout the second quarter, numerous commodities in this group experienced sharp reactions, including nonferrous metals, steel scrap, crude rubber, and textile fibers, as well as certain foods. Among the farm products, prices of some commodities, notably steers and hogs, moved contrary to the general trend during the quarter.

The upward movement in prices during the first half of July embraced commodities in all three of the economic classes. Prices of steers, hogs, meats, and

dairy products advanced sharply, as did those of steel scrap, tin, raw silk, and hides, but grains fluctuated violently with changes in weather and crop prospects.

The Bureau of Agricultural Economics indicates that the level of prices received by farmers was higher in mid-July than a month earlier. Prospective smaller world supplies of wheat and improved demand are among the factors tending to strengthen prices for the United States crop.

The National Industrial Conference Board cost of living index was only slightly higher in June than in May. Retail prices of food declined 0.2 percent; prices of coal and sundries remained stationary, but prices of clothing rose 0.3 percent and rents 0.6 percent.

Retail prices of department store articles advanced for the twelfth consecutive month, being 0.4 percent higher July 1 than June 1 and 9.2 percent above July 1, 1936, though they were about one-fifth below the 1929 level, according to Fairchild's index. Every major classification advanced during the month, women's wear and home furnishings showing the greatest gains. Home furnishings and piecegoods show the greatest advances since the beginning of this year and also over the 1936 lows.

Domestic Trade

RETAIL sales of general merchandise have experienced a seasonal decline in recent weeks, while sales of automobiles have dropped by more than the estimated seasonal change. Comparisons of sales results with those of the corresponding period of 1936 show a smaller rate of gain than in the earlier months of the year, as sales in June and July a year ago received a sharp stimulus from the distribution of funds to World War veterans in prepayment of their adjusted service compensation certificates. This direct increase in purchasing power through the issuance of Government obligations was reflected promptly in retail trade, and particularly in sales of automobiles. Furthermore, the trend of business activity generally was strongly upward at this time last year whereas in recent months business has maintained a fairly steady pace at a level well above that prevailing in the corresponding period of 1936. This smaller rate of increase in sales has been evident in rural as well as in urban areas, and two of the more important monthly series—passenger car and chain grocery store sales—recorded declines in June in comparison with the corresponding month of 1936.

June department store sales dropped by the estimated seasonal amount, the adjusted index remaining unchanged for the fourth consecutive month. The Nation-wide increase in sales over June 1936 was 7 percent, the variations by reserve districts being from no change in the Dallas district to a gain of 13 percent in the Chicago and 12 percent in the Cleveland districts.

Sales of general merchandise in rural areas were off moderately in June from the May results, but farm purchasing power remains relatively high, with favorable crops being moved to market at good prices. Farm income from marketings in June exceeded last year's total by \$17,000,000, or about 3 percent, despite the unusual rise in income in June 1936 occasioned by the drought which resulted in higher prices and an acceleration of marketings.

Sales of new passenger automobiles in June dropped more than seasonally, the adjusted index falling to a low for the year. Sales of cars usually decline sharply during the summer months, the period of preparation by the manufacturers for the change to new models. A year ago the active selling season was prolonged by the payments to the veterans.

Wholesale sales in June compared favorably with those of May, according to the sample data gathered by the Bureau of Foreign and Domestic Commerce from the trade. The increase over the corresponding month of 1936 for the 1,105 reporting concerns was about 15 percent, a larger relative gain than was reported for May.

Aggregate dollar sales of more than 500 manufacturers, which are also assembled monthly by the Bureau, were lower in June than in May but the drop was mainly the result of the falling off of business in the iron and steel classification. Sales in numerous other industries held up well, but showed a narrowing rate of increase over a year ago.

Employment

EMPLOYMENT in the manufacturing and non-manufacturing industries surveyed monthly by the Bureau of Labor Statistics declined slightly in June, mainly as a result of the drop in the number at work in manufacturing industries. Increased employment predominated in the nonmanufacturing industries. The employment shifts were accompanied by a moderate decline in pay rolls. The Bureau estimated that nearly 1,400,000 more workers were employed in these reporting industries in June than in June 1936.

Factory employment declined more than seasonally in June, the adjusted index dropping 0.6 of a point to 101.6 (1923-25=100). Factory pay rolls dropped 2.3 percent from May to June. Strikes in the steel industry had an important influence on the decline in factory employment and pay rolls.

Of the 45 durable-goods industries included in the Bureau of Labor Statistics' tabulation, 24 showed declines in employment in June as compared with May. The recessions were generally small, except those in blast furnaces, steel works and rolling mills, and in plants producing bolts, nuts, washers, and rivets. Several industries reported seasonal gains, the sharpest being that for the radio and phonograph industry (32 percent). Gains up to 3 percent were recorded in the aluminum, tin can and other tinware, structural metal, machine tool, and cement industries. For the durable-goods group as a whole, the net decline amounted to about 1 percent.

In the nondurable-goods industries, the recession in the total number at work was of about the same proportion as in durable-goods industries. Among the industries in this group, 17 reported gains in the number at work, and the remaining 27 reported declines. Manufacturers of food and kindred products were the principal ones showing marked gains in employment over the month interval, and these were largely seasonal in character. The sharpest declines, which were also partly seasonal, included the fertilizer industry and various branches of the textile and wearing-apparel industry. Other declines reported included those for the rubber boot and shoe, rubber goods other than footwear and tires, and sugar-refining industries.

In contrast with the change in the manufacturing industries, 13 of the 16 nonmanufacturing industries reported employment gains in June as compared with May. The largest relative gains were in dyeing and cleaning, laundries, and building construction, in which increases in employment are customary at this season. Employment in metalliferous mines continued the virtually unbroken succession of increases which have been reported each month since July 1935.

Increased pay rolls also were shown in 13 of the non-manufacturing industries in June, including a 1.1 percent gain for the important retail-trade field. The largest relative increase was in anthracite mines where the settlement of labor difficulties brought increased output and pay rolls.

Finance

STOCK prices, which declined in June for the third consecutive month, rose, sharply during July with the volume of trading increasing after the exceptionally small turnover in June. Bond prices were firm during July under continued light trading. New capital issues, which increased in June primarily as the result of the offering of a few large issues, were very small in July in spite of the improvement in stock market prices. Reports of corporation earnings for the first half of 1937 revealed a considerable improvement, with the profits of a representative group of large corporations rising to a level approximating that for the first 6 months of 1930.

Among banking statistics covering the first 2 weeks of July, the further rise in the commercial, industrial, and agricultural loans of the reporting member banks was of major interest. The excess reserves of member banks were estimated at \$870,000,000 on July 21, as compared with \$752,000,000 on June 16, this increase being partly the result of a decrease in reserve requirements and partly the result of disbursements of Treasury balances with Federal Reserve banks.

Gold continued to flow into the United States during the first half of July. Engagements for American account in the London market since July 9 have been negligible, however, because of a rise in the effective London price for gold to a point which made shipments to the United States unprofitable. This development, which checked the heavy movement of gold from London to New York, resulted from an advance in sterling against dollars great enough to offset the fall in the sterling price of gold and reflected an apparent tendency for funds to flow from this market to London. The

gold-import movement from Japan, in progress since March, continued during the first half of July, and additional heavy engagements for shipment to the United States were reported.

Imports of gold in July produced a further increase in the inactive gold account in the Treasury, which reached \$1,213,000,000 on July 19. On the following day, a decrease was reported for the first time since the policy of segregating new gold acquisitions was inaugurated on December 21, 1936. The Treasury had previously announced the conclusion of agreements with China and Brazil, under the terms of which the United States will make gold available to China in exchange for silver and sell gold to Brazil up to a total of \$60,000,000 for the purpose of promoting exchange equilibrium.

The French fiscal and exchange crisis culminated in a further depreciation of the franc in July. Although the rate for spot francs moved within narrow limits during June, the discount on forward francs widened significantly and, on June 29, the French Government decreed a temporary moratorium (abrogated 2 days later) on commitments payable in gold or foreign currencies. On June 30, the monetary law of October 1, 1936, under the terms of which the franc had been maintained at an exchange value of approximately 66 percent of former parity, was superseded by a decree providing that the gold content of the franc would be fixed at a later date by the Council of Ministers. Quotations for the franc in New York fell abruptly, and the continued decline during the first 3 weeks of July carried franc exchange to levels below the parity existing before the devaluation of the dollar.

¹ This item was first reported in May. See footnote marked "⊗" on p. 32 of this issue.

Foreign Trade

EXPORTS decreased in June from the relatively high value reached in May, while imports attained practically the same value as in the preceding month. Both exports and imports were considerably higher than in June 1936 as the same factors which operated to produce a larger value of foreign trade in the earlier months of the year were also at work in June. These included so far as exports are concerned a higher level of prices, particularly for crude materials and foodstuffs; the improvement in economic conditions in most of our major markets; and in certain areas the special demands arising from rearmament programs. An increase in the value of trade was reported for all the leading geographic areas, the variation being from the 16 percent increase for Europe to the more than 60 percent gain in Asia.

The value of exports rose 33 percent for the 6-month period in comparison with the first half of 1936, with prices contributing about one-fourth and increased quantities about three-fourths of the rise.

Among the commodity groups the principal expansion this year has been in shipments of metals, machinery, motor vehicles, and nonmetallic minerals, but exports of other manufactured articles (rubber, textiles, lumber, paper, and chemicals, for example) increased moderately. Exports of agricultural products were slightly larger in value during the first half of the year than in the corresponding period of 1936, but were still relatively low. Larger exports of unmanufactured cotton, grains, feeds,

vegetables, and dried and canned fruit were reported; exports of meat products, fresh fruit, and leaf tobacco decreased.

Exports of nonmetallic minerals, consisting chiefly of petroleum products, increased very considerably in value as compared with last year, although they were lower in June than in May. Metals and manufactures and machinery and vehicles were among the groups of manufactured products which have experienced a much improved foreign demand this year.

The increase in imports in the first half of 1937 over those of the first half of 1936 resulted in considerable measure from the larger volume of crude materials and foodstuffs purchased at rising prices. However, imports of finished manufactures also increased substantially in volume. The increase in the value of imports from those regions which export to us mainly crude materials and foodstuffs was conspicuously large—182 percent for Oceania, 98 percent for Africa, 62 percent for South America, and 43 percent for Asia. The relative increase in the value of imports from Europe was 37 percent. These percentages for the geographic areas are computed on the basis of 5 months' figures, the June returns not being completed as yet.

The increase of 45 percent in the value of imports in the first 6 months this year in comparison with the first half of 1936 resulted from a 28-percent gain in volume and a 13-percent increase in unit value (price).

Real Estate and Construction

CONSTRUCTION contracts awarded increased during June following the substantial recession in May, according to the F. W. Dodge Corporation data. Total awards in the 37 States covered by the Dodge service reached \$318,137,000, the largest monthly figure reported since April 1931. The increase resulted from the larger volume of both public and private work initiated. Total awards were 37 percent larger than in June 1936 and for the first time this year the value of publicly owned projects exceeded the total for the corresponding month of 1936.

Major increases in June were reported in the industrial classifications—factory, railroad, electric light and power, and pipe-line construction. The gain in residential construction resulted mainly from activity in the apartment field; there was a moderate decline in contracts for single-family dwellings.

Among the groups in which public work is particularly significant, the major increases were reported for educational buildings, sanitary systems, and water-front projects. The value of contracts awarded for highway construction was slightly smaller in June than in May.

The semiannual survey of the National Association of Real Estate Boards revealed a favorable situation in the real-estate field with respect to vacancies, rents, and financing, but a large number of cities reported that the advance in construction costs was retarding the

planning and initiation of new projects. The available statistical data from other sources show the increase in costs this year to have been very substantial. The trend is evident from the monthly indexes of building costs which are published regularly in the SURVEY, as well as from the data gathered by the Federal Home Loan Bank Board on the cost of residential construction in various cities. Material prices have moved fractionally lower during July, but the Bureau of Labor Statistics' wholesale price index for this classification is only 0.5 of a point under the high of 97.2 (1926=100) reached at the end of May.

The association's survey revealed practically no oversupply of residential units; rather an inadequate supply of single-family dwellings was reported in nearly three-fourths of the reporting cities, and of apartment space in more than half of the cities. Improvement was also reported in the rental situation with regard to commercial properties, although more than 80 percent of the cities reported an over or normal supply.

On the basis of a special survey of the turnover of vacant property, the association reported that the number of city lots sold in the first 4 months of the year in 152 cities was about twice the number of houses built. While this was partly the result of seasonal conditions, it suggests preparations for an enlarged volume of residential operations.

Transportation

THE volume of freight carried by the railroads increased by about the usual seasonal amount during the first 3 weeks of July, following a 2-month period of decline which reduced daily average loadings in June, seasonally adjusted, to the lowest level since October. As in May, the June decline was to some extent traceable to strikes which curtailed miscellaneous loadings, but other classes of freight also showed declines. Coke and grain and grain products were exceptions.

Loadings are still above those of a year ago, but the margin of gain has narrowed considerably. Thus, the increase during the first 5 months of this year over the corresponding period of 1936 amounted to about 14 percent, but the gain in June over the preceding June was about 7 percent.

With this reduction in the rate of gain, attention is called to the fact that the marked recovery in freight traffic has been a comparatively recent development. The improvement attained significant momentum only during the last year and a half, and the volume of traffic has not yet recovered to the same extent as has the volume of industrial output. In the first half of this year, loadings were 26 percent below the volume in the corresponding period of 1929, while industrial production, according to the Federal Reserve index, was about 4 percent lower.

The reduction in loadings during June was accompanied by a shrinkage in gross revenues, and the gain over the corresponding month in the preceding year was the smallest reported since August 1935. The gain in June 1937 over the corresponding month of 1935 in the operating revenues of all class I roads amounted to 6.4 percent, as compared with an increase of 12 percent for the first 6 months of the year. Net railway operating income for the half year increased by one-fourth.

Orders for railway equipment were sharply curtailed during June, and during the first half of July only one large purchase of freight cars was announced. This recession followed a period of unusually heavy buying by the railroads, and total orders for the first half of the year for freight cars, locomotives, and passenger cars were larger than for any full year from 1930 to 1935, inclusive. For passenger cars, the 6 months' figure was larger than the 1936 total.

Though the cyclical movements of equipment buying and loadings and revenues are closely related, this does not imply a causal relationship between the current decline in equipment buying and the recent reduction in the rate of gain in loadings and revenues. The most important factor at the moment is the seasonal element, which usually results in the timing of orders with regard to the fall traffic peak.

Distribution of Manufacturers' Sales

By S. L. Kedzierski, Chief, Wholesale Trade Section, Marketing Research Division

THE importance of the various primary channels of distribution for manufactured goods has been disclosed by a new publication of the Bureau of the Census presenting data compiled in the 1935 Census of Business.¹ The factual data gathered in the survey deals with the first stage of distribution of manufactured goods which go directly to the following outlets: (1) Manufacturers' own wholesale branch, (2) industrial

ing plants amounted to 43.8 billion dollars. Of this amount 38.2 billion dollars, or 87.3 percent, represents sales through six channels of primary distribution.

For all industrial groups combined, the proportion of sales made through these principal channels in 1935 is presented in table 1. These have been grouped in the order of their importance. The portion of the total sales volume not distributed in the table (12.7 percent) consists of interplant transactions, exports invoiced direct from plants, and other sales not distributed through usual channels or not allocated. Considerable deviation from these over-all percentages is evident in the various lines of business, and the extent of these variations is developed in the statistical and graphic data assembled in this article.

Figure 1.—Percentage Distribution of Manufacturers' Sales, by Primary Channels of Distribution, 1935

and other large users, (3) wholesalers and jobbers, (4) manufacturers' own retail stores, (5) retailers of all types, (6) household consumers, and (7) other plants in manufacturers' own organization. The report includes a comparative distribution of sales in 1929 and 1935, the number of manufacturers using each of these channels of primary distribution, and the number using any one channel exclusively in 1935.

This survey also shows, for the first time, the number of employees engaged in distribution activities and the cost of distribution incurred at manufacturing plants. Data are presented for each of 315 separate industries, as well as for the industry groups.²

Importance of Various Channels.

According to the survey, the sales volume in 1935, at f. o. b. factory prices, of 134,392 reporting manufactur-

Total.....	87.3

Source: Bureau of the Census, Census of Business 1935, Distribution of Manufacturers' Sales, p. 19.

From the data presented in table 2 it is evident that in most industrial groups, four types of outlets play an important role in distribution of manufacturers' goods. Figure 1 shows graphically the relative importance of the various major channels.

Two-Thirds of Plants Sell Exclusively Through One Channel.

Figure 2 shows the number of plants selling through various distribution channels. The bar in each instance indicates the number of plants using each type of outlet and the black portion represents the proportion of the plants which sell exclusively through this one channel. Thus, 52,743 manufacturing plants sold goods to retailers, and out of this number 22,740 plants or 43.1 percent used this means of distribution exclusively; 47,192 plants sold to wholesalers and jobbers and 42.6 percent of these establishments sold exclusively to this field, etc. Table 3 presents these data for each of the 16 industrial groups.

The extent of concentration of sales for all industries combined is shown in figure 3. About two-thirds of the manufacturing plants or 89,144 establishments sold goods exclusively through one channel. The lower portion of this chart shows the break-down of sales of plants selling exclusively through one channel, arranged

¹ The material in this article is, in general, a summary of the data presented in the publication under this title "Distribution of Manufacturers' Sales", recently issued by the United States Department of Commerce, Bureau of the Census. Copies of this report may be obtained gratis by writing to that Bureau.

² Data were not compiled for 22 of the 337 industry classifications into which manufacturing activity is divided by the Census Bureau. A list of these industries and the reasons why such distribution was not made are given on pp. 17 and 18 of the publication noted above.

according to type of outlet used. Of all those plants using a single outlet, about one-fourth sold to industrial users and nearly the same percentage to retailers, while more than one-fifth of these manufacturers obtain their distribution through wholesalers and jobbers.

Shifts Between 1929 and 1935.

Table 4 is a comparison of the primary channels of distribution used in 1935 with those used in 1929 by industry groups.³ Comparable data are available for 91,688 plants, or 68.3 percent of the plants reporting. These plants had sales in 1935 of 26.3 billion dollars, or

Figure 2.—Manufacturers' Sales—Number of Plants Selling Through Various Distribution Channels, 1935.

69 percent of total distributed sales. The data in table 4 as well as those for each of the 315 individual industries, disclose many changes in the relative importance of primary channels of distribution used by certain industries or groups of industries between the 2 years under discussion. While these changes are more important in some industries than others, it is apparent that there have been but few significant changes in the distribution methods of manufacturers as a whole. The outstanding changes for all industries combined were the decline in the proportion of manu-

³ Due to changes in the composition of the various industry groups between 1929 and 1935 and the lack of comparability as between years for certain industries, the data in table 3 are confined to 91,688 plants or 68.3 percent of total plants reporting. For further explanation see p. 15, Distribution of Manufacturers' Sales, Census of Business 1935, Bureau of the Census.

facturers' sales to wholesalers and jobbers from 32 percent in 1929 to 27 percent in 1935, and the reduction of sales direct to industrial and other large users from 26 percent of the total in 1929 to 25 percent in 1935. Against these reductions in relative position it is shown that the proportion of sales to manufacturers' own wholesale branches increased from 18 percent in 1929 to 21 percent in 1935, while sales direct to retailer increased from 20 percent to 23 percent.

Distribution Expenses Surveyed.

The 1935 Census of Business provides for the first time data on distribution expense incurred at manu-

Figure 3.—Proportion of Manufacturers' Plants Selling Exclusively Through One Channel and Percentage Distribution of Such Plants, by Type of Channel, 1935.

facturing plants. This report shows the number of employees engaged in distribution activities, the pay roll of distribution employees, traveling expenses of salesmen, advertising, credit and collection expenses, bad debts, and the portion of such overhead expenses as rent, interest, and general administrative expense allocated to distribution.

In the collection of these distribution expense data many difficulties were encountered because there is no uniform classification for such expense common to industry, and some manufacturers did not have accounting systems which differentiated production costs from distribution costs. The result is that one plant may consider an item as a distribution expense while another plant may classify it as something else. As a result of this lack of uniformity among manufacturers in classifying and recording expense data, the accuracy of the figures given in the report cannot be warranted, and all expense data reported in the survey of Distribution of Manufacturers' Sales should be considered with these facts in mind. Distribution expense data as reported for the 16 industry groups should be considered in the light of general relationships and should not be used for specific comparisons with any of the 315 industrial classifications.

Source: Bureau of the Census; Census of Business 1935; Distribution of Manufacturers' Sales, table B, p. 21, used as basis for distribution of \$38,212,850,000, or 57.3 percent of the total sales reported.

Of the total of 134,392 manufacturing plants, only 53,623 with total net sales of \$21,418,000,000 reported on both elements of distribution expense (distribution pay roll and other distribution expense). These 53,623 plants had an expense ratio of 9.4 percent, divided into 4.1 percent distribution pay roll and 5.3 percent other distribution expenses. It will be observed from table 5 that chemicals and allied products, with 15.2 percent; stone, clay, and glass products, with 11.7 percent; machinery, with 11.7 percent; and forest products, with 11.4 percent, had the largest total distribution expenses in 1935.

Transportation equipment, air, land, and water, with 3.2 percent; products of petroleum and coal, with 7.4 percent, and rubber products with 7.8 percent, re-

ported the lowest distribution expense. In practically every instance, with the exception of textiles and their products, and printing and publishing, distribution pay roll was the lesser of the two reported expenses.

Employees Engaged in Distribution.

While it was difficult in some cases for the manufacturers reporting to separate employees engaged in production and those engaged in distribution, it is possible to ascertain a measurement of number of employees engaged in such activity for purposes of general comparison by industries. Included in the distribution expenses of the 53,623 plants is a total of \$882,953,000 paid to 523,623 full-time and part-time officers and employees who devoted all or a major portion of their time to distribution activities.

Source: Bureau of the Census; Census of Business 1935; Distribution of Manufacturers' Sales, table A, p. 20.

In some cases a wide variation was found to exist in distribution expenses between the major industry groups and also between different industry classifications within the same major industry group. This is natural perhaps, not only because of the wide divergence in selling methods employed by different industries but also because of the far-reaching changes that have been and are still taking place in the channels of distribution in many fields.

No attempt has been made in the survey of Distribution of Manufacturers' Sales to explain the reasons, aside from the limitation of the data, for these variations or to arrive at any conclusions as to what relation should exist between the cost of distribution and sales volume for any particular industry group or industry classification. The aim has been rather to present the facts as they exist in as simple and concise a manner as possible.

The value to be derived from the survey of Distribution of Manufacturers' Sales, Census of Business 1935, is not particularly from tables which are presented for 16 industry groups but rather from the tables presenting the data in detail for each of the 315 industry classifications. For the latter purpose it should be of value to management and financial executives. This holds true not only of the tables which show the flow of manufactured goods through channels of primary distribu-

tion, but also of the distribution expenses of each of the 315 industries as reported by the business census.

Table 5.—Summary of Distribution Expenses, by Industry Groups

Sales of Chain Drug Stores¹

AS part of the general program of the Bureau of Foreign and Domestic Commerce designed to secure more adequate data on the trend of retail sales, figures from chain drug stores have been collected and made available to the public each month since the latter part of 1935. The monthly releases of the Bureau have given the percentage changes in sales for the current month as compared with the previous month and with the same month a year ago. It is the intention to construct an index of such sales as soon as data are available for a sufficient period of time. Early this year the cooperating chain organizations were requested to furnish annual sales figures for 1935 and 1936, the information to be used both for checking previously reported monthly figures and as a basis for annual tabulations.

The representativeness of the data gathered is indicated by a comparison of the results reported by cooperating firms with the totals reported by the Bureau of the Census in its 1935 Census of Business. The firms reporting monthly data operated 2,345 units with sales of \$228,410,000 in 1935, or more than 66 percent of the store units and 76 percent of the total dollar volume reported for drug chains, according to the Census. In more recent periods, however, the cooperation of additional firms has raised the estimated coverage to about 84 percent of total chain store sales volume. About one-fourth of all drug store sales in 1935 were made by chain units, according to the 1935 Census of Business.

Fountain Sales Show Largest Relative Expansion in 1936.

Total net drug chain sales for an identical group of store units were 4.7 percent larger in 1936 than in 1935, according to the data collected by the Bureau of Foreign and Domestic Commerce, with the widest increase—11.9 percent—reported for fountain sales. The other two categories into which sales were divided, namely, tobacco and "all other", recorded increases of 3.6 percent and 2.5 percent, respectively. It should be noted that these increases, based upon identical stores in operation for both years, do not reflect changes in sales volume accounted for by the increase or decrease in the number of units operated by cooperating chains. During the 2-year period, additional units were opened and others discontinued by the reporting firms. All units operated by reporting chains in 1936 recorded sales amounting to \$243,489,000, an increase of 6.6 percent over 1935. This percentage compares with the 4.7 percent gain for identical stores.

¹ Prepared by Edward L. Lloyd, Chief, Market Data Section, and Arnold L. Skinner from data collected by that section of the Marketing Research Division.

Results by Regions and Size of Chains.

Most of the cooperating firms operated in only one geographic area.² However, nearly all of the reporting chain organizations whose operations extended over several regions were able to report separate regional figures. The organizations reporting such data accounted for nearly 50 percent of all chain drug store sales in 1935. The distribution of sales and stores is presented in table 3.

While total sales of identical stores for 1936 increased 4.7 percent over those for 1935, sales in the West South Central States increased 13.7 percent and those in the New England States showed a gain of only 1.5 percent. Changes in tobacco sales in this group of stores ranged from a 14.6 percent gain in the West South Central States to a 1.7 percent loss in the West North Central States. Changes in fountain sales ranged from a 17.3 percent increase in the Mountain and Pacific States to a 6.2 percent increase in New England. These data as well as comparative figures for all sales reported are presented in table 1.

Source: Data collected by the Bureau of Foreign and Domestic Commerce.

Interesting variations appear when sales are grouped according to the number of units operated by each organization. For this purpose, the firms were divided into four classes as follows: Those operating 10 stores or less; 11 to 25 stores; 26 to 99 stores; and 100 stores or more. Grouped in this fashion, identical store units

² Census regions used and States comprising them are as follows: New England (Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, Vermont); Middle Atlantic (New Jersey, New York, Pennsylvania); East North Central (Illinois, Indiana, Michigan, Ohio, Wisconsin); West North Central (Iowa, Kansas, Minnesota, Missouri, Nebraska, North Dakota, South Dakota); South Atlantic (Delaware, District of Columbia, Florida, Georgia, Maryland, North Carolina, South Carolina, Virginia, West Virginia); East South Central (Alabama, Kentucky, Mississippi, Tennessee); West South Central (Arkansas, Louisiana, Oklahoma, Texas); Mountain and Pacific (Arizona, California, Colorado, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, Wyoming).

recorded increases in total net sales in 1936 in inverse proportion to the size of the chains (table 1). Chains operating 10 stores or less showed a 14.1 percent increase while sales of those organizations operating 100 stores and more rose 2.4 percent.

Sales increases for all stores operated were about the same for the smallest and next smallest groups, and the variations for all units operating less than 100 stores were not large. The relative gain for chains operating 100 or more stores was about a third as large as that for the other chains.

Distribution of Dollar Sales.

Studies made of the distribution of dollar sales of drug-store commodities by geographic regions, and by size of chain organizations, are based on sales of those organizations which reported data for each of the classifications. Table 2 reveals some change in the composition of chain drug-store sales from 1935 to 1936. For the United States, the percentage of total sales represented by tobacco sales decreased from 23.5 in 1935 to 23.1 in 1936, while the proportion of fountain sales to total sales increased from 19.6 percent in 1935 to 21.0 percent in 1936.

The distribution of sales by size of chains (based upon number of stores operated) shows that tobacco sales accounted for nearly one-fourth of all sales in 1936 in chains operating 26 or more stores, and closer to one-fifth for the smaller chains (table 2).

Source: Data collected by the Bureau of Foreign and Domestic Commerce.

The ratio of tobacco sales to total net sales decreased from 1935 to 1936 in three of the size groups, and increased in one. The ratio of fountain sales to total net sales increased in 1936 as compared with 1935 in each group. The only group reporting an increase in the ratio of "all other" sales to total net sales was that comprising the smallest chains, those operating 10 stores or less.

Average Sales Per Store.

For the entire country, average sales per store operated by the reporting chain drug companies amounted to \$104,745 in 1936. By regions, this figure was highest in the Mountain and Pacific States, where the average was \$120,880 per store, followed by the New England States with a \$102,633 average. The lowest figure was that of \$62,542 shown by the East South Central States.

The average sales per store varied with the size of the chain organization, according to the grouping in table 3. Chains operating 10 stores and less showed an average annual volume per store of \$61,500, or about half the average for the units of the companies operating 100 stores or more.

¹ While all chains are represented in the chain size classification, only 80 percent of sales of reporting firms are distributed by geographic regions. All sales of firms giving data by regions accounted for about 50 percent of chain drug store sales in 1935.

Source: Data collected by the Bureau of Foreign and Domestic Commerce.

Sales Trend Continues Upward in 1937.

Preliminary data received from these cooperating firms for the first half of 1937 indicate an increase in total chain drug store sales over the same period of 1936 of about 6 percent. Fountain sales have continued to record a more-than-average increase. Tobacco sales appear to be increasing at the same rate as that for all sales combined, while the increase in sales of "all other" items has been below average. The widest increases, by geographic areas, have been in the East North Central and South Atlantic regions where sales increased about 10 percent.

Data on independent drug store sales, which the Bureau is collecting from 14 States in the Middle-western, Southwestern, and Mountain regions, indicate an increase for the first half of 1937 approximating that for chain drug stores. This estimated increase of slightly more than 7 percent compares with the 10 percent gain shown for these independent drug stores in 1936 over 1935.

¹ Compiled by the *Securities and Exchange Commission* and represents the volume of new securities (i. e., securities other than those issued in connection with exchanges of securities for the registrants or their predecessors' securities, or in connection with the issuance of voting trust certificates or certificates of deposit) covered by registration statements that have become fully effective (i. e., registered with the Commission). The data do not include those registrations which have been made effective under notice of deficiencies and effective under notice of hearings. They do not include data on registration statements filed and not yet effective, whether because of stop or refusal orders, withdrawals, or because examination has not yet been completed. The data are based solely on the registration statements as filed by the registrants with the *Securities and Exchange Commission*. All data refer to registrants' intentions as of the date of filing or of later amendments and do not cover the actual sales of securities. The filing of registration statements was made mandatory under the provision of the Securities Act of 1933. Additional details are shown in the monthly reports of the Commission.

² Average of months shown.

¹ Compiled by the *U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce*, from data compiled by the *National Association of Finishers of Textile Fabrics*. The revision of the production data was occasioned by adjustment of the monthly figures for 1934, 1935, and 1936 to revised annual estimates for the entire industry, which are also made by the Association. The data for 1934 through May 1935 were practically complete, but the coverage dropped sharply in June 1935. Using an identical sample for 1935 and 1936, based on the reports of 97 companies accounting for approximately 70 percent of the total output of the industry, it was possible to raise the figures to industry totals and thereby derive series comparable with the figures for 1934. No serious distortion in the December 1934-January 1935 percentage changes for the 4 series resulted from this procedure; these changes were practically the same as those occurring in the original sample which, until the middle of 1935, represented practically the entire industry. The figures for 1937 have been raised in the same proportion as those for 1936, no important shift in the current sample as compared with the identical sample for 1935 and 1936 being apparent. Industry totals for stocks (heretofore published as reported) are derived by applying to the raised production figures the ratio of stocks to production as indicated by the original sample. All figures are reported by the Association on a 13-month basis; the production figures are here prorated to calendar months, while stocks are as of the end of each 4-week period, except that the two figures nearest the middle of the year are averaged.

¹ This series represents a continuation of data shown in the Survey of Current Business through the October 1929 issue. The data were compiled by the *British Board of Trade* for the periods January 1913-March 1929 and January 1933 to date. From April 1929 through December 1932 the data are estimates based on figures reported by the *Tea Brokers Association of London*, the members of which are estimated to handle about 90 percent of all tea imported into the United Kingdom. Tea stocks represent all tea held or entered to be warehoused in the bonded warehouses of Great Britain and Northern Ireland as of the last day of the month. For 1937 data see p. 44 of this issue.

Monthly average.....	18,595	27,434	47,592	309,624	285,256	277,013

¹ Compiled by the U. S. Department of Commerce, Bureau of the Census, from reports of 260 identical plants. The production of these plants (using the shipment and stock data to compute the production figures) represented approximately 66 percent of the entire face-brick production in 1934, 65 percent in 1935, and 68 percent in 1936. For 1937 figures see p. 53 of this issue.

Monthly Business Statistics

The following table represents a continuation of the statistical series published in the 1936 Supplement to the Survey of Current Business. That volume contains monthly data for the years 1932 to 1935, inclusive, and monthly averages for earlier years back to 1913 insofar as available; it also provides information as to the sources of the data and sufficient descriptive material for a proper interpretation of each series. These notes also indicate the source from which monthly figures prior to 1932 may be obtained. It is essential that all users of the SURVEY have this base book which may be secured from the Superintendent of Documents, Government Printing Office, Washington, D. C., for 35 cents per copy.

A few series have been added or revised since the 1936 Supplement went to press. These are indicated by an asterisk (*) for the added series and by a dagger (†) for the revised series. A brief footnote accompanying each of these series provides a reference to the source where the descriptive note may be found.

The terms "unadjusted" and "adjusted" used to designate index numbers refer to the adjustment for seasonal variation. Data subsequent to June will be found in the Weekly Supplement to the SURVEY.

Monthly statistics through December 1935, together with explanatory notes and references to the sources of the data may be found in the 1936 Supplement to the Survey.	1937	1936								1937

*Revised.

† Base shifted to 1923-25=100. In computing base, the last quarter of 1922 was substituted for the last quarter of 1925 to eliminate the abnormally high prices which resulted from the 1925-26 strike in the Pennsylvania anthracite mines. Figures beginning 1929 will be shown in a subsequent issue.

February 1937 issue and for construction contracts awarded in 1936 see table 28, p. 18 of this issue.

§ Data for July 15, 1937: Total 125, chickens and eggs 102, cotton and cottonseed 106, dairy products 116, fruits 145, grains 139, meat animals 144, truck crops 96, miscellaneous 113.

† Revised Series. Retail food prices, for monthly data for period, 1923-36 see table 9, p. 20 of the February 1937 issue. World stocks of foodstuffs and raw materials revised for period 1920-37. For revisions see table 19, pp. 17 and 18, of the May 1937 issue.

Monthly statistics through December 1935, together with explanatory notes and references to the sources of the data may be found in the 1936 Supplement to the Survey	1937	1936							1937

* Revised.

*New series. Data on number of grade crossing projects represent a breakdown of the total projects shown in the 1936 Supplement. For the foreclosures indexes, earlier data, together with a complete description of the indexes, see table 18, p. 20 of the April 1937 issue. Total mortgage loans outstanding of Federal Savings and Loan Associations represent the combination of loans of "new associations" and "converted associations" which were shown separately in the 1936 Supplement to the Survey. The Home Owners' Loan Corporation data are for loans closed through June 12, 1936, when lending operations ceased, and for loans outstanding thereafter. The June 1936 figure represents the total of all loans made during the full period of lending operations.

†Index as of July 1, 1937, is 241.8.

‡Data revised beginning January 1934. Revisions not shown on p. 25 of the July 1937 Survey will appear in a subsequent issue.

Monthly statistics through December 1935, together with explanatory notes and references to the sources of the data may be found in the 1936 Supplement to the Survey	1937	1936							1937

† Revised.

† New series. Data on radio and magazine advertising cost are compiled by the *Publishers Information Bureau, Inc.*, successors to *National Advertising Records*, and are not comparable with data published prior to those shown in the January 1937 issue. Earlier figures, together with data for 1937, when available, will be published in a subsequent issue.

† Grocery chain-stores sales indexes in continuation of those shown on p. 14 of the May 1937 Survey are: Unadjusted, February 97.8, March 100.1, April 99.7, May 98.3, and June preliminary 94.8; adjusted, March 99.1, April 96.8, May 96.8, and June preliminary 93.4.

Monthly statistics through December 1935, together with explanatory notes and references to the sources of the data may be found in the 1936 Supplement to the Survey

* Revised.

† New series. See pp. 14-20 of the September 1936 issue for figures for period Jan. 1929-July 1936.

† Revised series. For factory employment revisions beginning January 1934, see table 12, p. 19, of the March 1937 issue. Indexes of department store sales in the Chicago Federal Reserve district, both unadjusted and adjusted, were revised for the period 1923-36. See table 23, p. 16 of the July 1937 issue.

† A new series on department store sales in the St. Louis Federal Reserve district is shown in table 22, p. 16 of the July 1937 issue. This will be substituted for the present data in a subsequent issue.

Monthly statistics through December 1935, together with explanatory notes and refer- ences to the sources of the data may be found in the 1936 Supplement to the Survey	1937	1936							1937

* Revised

¹ Data revised beginning March 1936. For revisions see p. 32 of the July 1937 issue.

² Form of reporting member bank loans revised beginning May 1937; the new items, which are self-explanatory, are not available prior to that date. For a more detailed discussion of the significance of the new series, see the Federal Reserve Bulletin for May 1937, p. 44 and for June 1937, p. 530.

Monthly statistics through December 1935, together with explanatory notes and references to the sources of the data, may be found in the 1936 Supplement to the Survey

1 Data will be shown when available. 2 No quotation. 3 Revised. 4 Preliminary.

* New series. Data for period 1929-36 are shown in table 10, p. 20 of the February 1937 issue.

† Revised series. Anthracite and bituminous coal production revised for years 1935 and 1936. Revisions not shown in the March 1937 issue will be published in a subsequent issue. Series on petroleum and products revised for 1935. See table 14, p. 19 of the April 1937 issue. Series on consumption of gas and fuel oil in the production of electric power revised for 1936. See p. 45 of the May 1937 issue.

* Data on stocks of crude petroleum east of California revised in January 1937, certain stocks formerly included in "tank farms and pipe lines" being transferred to "refineries." December 1936 figures comparable with those shown for January 1937 are, refineries, 39,912; tank farms and pipe lines, 206,497.

Monthly statistics through December 1935, together with explanatory notes and references to the sources of the data may be found in the 1936 Supplement to the Survey	1937	1936								1937

* Revised. †Number of States reporting varies slightly from month-to-month, but the comparability of the series is not seriously affected.

* One company ceased reporting after December 1936. Figure for December 1936 comparable with January 1937 is 110,634.

† Revised series. Production of boots and shoes, for 1936 revisions see p. 46 of the March 1937 issue. Series on retail distribution of gasoline revised for 1935 and 1936. Revisions not shown on p. 46 of the May 1937 Survey will appear in a subsequent issue.

Monthly statistics through December 1935, together with explanatory notes and references to the sources of the data may be found in the 1936 Supplement to the Survey	1937	1936							1937

* Revised.

° Less than 500 tons.

† Data revised for 1936. See p. 48 of the June 1937 issue.

‡ Beginning January 1937, the American Iron and Steel Institute computes the percent of capacity on a weekly average basis, with no allowance for Sundays or holidays; the figure shown here will be carried forward on the old basis (which relates daily average output to daily average capacity with allowance for Sundays, July 4, and Christmas) in order to keep the series comparable.

Monthly statistics through December 1935, together with explanatory notes and references to the sources of the data may be found in the 1936 Supplement to the Survey	1937	1936							1937

* Revised. * Estimated.

† Monthly data on copper production, shipments, and stocks for months of 1936, comparable with those shown in the 1936 supplement through 1935, are shown in table 27, p. 20, of the July 1937 issue.

‡ Classifications changed starting in January 1937, but for all practical purposes the series shown are comparable. Classes 4 and 5 are practically equivalent to former class 4; changes made in classes 1, 2, and 3 do not affect the total for the 3 classes as shown here.

§ Revised series. Data revised for 1936. See p. 50 of the May 1937 issue.

Monthly statistics through December 1935, together with explanatory notes and references to the sources of the data may be found in the 1936 Supplement to the Survey	1937	1936							1937

† See note marked "†" on next page.

Revised.

⊕ Comprises pulp used in the producing mills and shipments to the market.

† Revised series. Production of wood pulp, except soda pulp, for 1936 has been revised to conform with the industry totals reported by the U. S. Pulp Producers' Association for that year. For these items, consumption and shipments have been adjusted to the revised production figures by the Survey of Current Business. For the same items, data on production and consumption and shipments for 1935 adjusted to census data for that year will appear in a subsequent issue. Pending publication of these figures, data shown in monthly issues starting with March 1937 can be used in conjunction with earlier data shown in the 1936 Supplement without serious error. Figures on stocks have not been adjusted through December 1936. All wood-pulp data except soda pulp, starting with January 1937 are based on the reports of 145 identical mills (earlier months are for 162 mills) adjusted to compare with the figures for earlier periods. Data on soda pulp (production and consumption and shipments) have been adjusted to the 1935 census by the Survey; earlier figures appeared in the 1936 Supplement.

Monthly statistics through December 1935, together with explanatory notes and references to the sources of the data may be found in the 1936 Supplement to the Survey	1937	1936								1937

Sources of Current Trade Statistics

Market Research Series No. 13

A bibliographical reference book covering approximately 3,000 series of statistical reports issued by 240 governmental departments and commissions, trade associations, private research organizations, and trade and technical journals.

Approximately three-fourths of the series listed are carried in the Survey of Current Business, but users of the Survey will find of interest references to the availability of additional statistical material not published currently in this periodical.

Sources of Current Trade Statistics is a book which should be a part of the equipment of libraries, statistical departments, and students interested in current economic changes.

Copies are obtainable at 25 cents each from the Bureau of Foreign and Domestic Commerce, Washington, D. C., or through any of the Bureau's offices located in principal cities throughout the country. *Copies are NOT obtainable from the Superintendent of Documents.*

Stories of American Industry

To bring out the lighter and more interesting side of the history and the progress of American industry the Department of Commerce recently inaugurated a series of weekly broadcasts which have been presented to the public over a coast-to-coast network of the Columbia Broadcasting System. To date more than 20 typical American industries have been discussed.

No phase of American history and progress is so packed with romance as that of our industrial growth. The cotton gin, the Bessemer process, the tireless experiments of Edison, the application of steam to transportation—these and many other developments have been highlights and stepping stones of American industrial progress.

Demand for these weekly talks has been so great that those made up to June of this year have been published in a handy booklet. Copies of this booklet may be obtained, for 10 cents each, from the Superintendent of Documents, Government Printing Office, Washington, D. C., or through offices of the Bureau of Foreign and Domestic Commerce located in principal cities throughout the country.
