The Business Situation

By the Office of Business Economics

Business Investment Outlays

U. S. Department of Commerce, Office of Business Economics

Data: SEC & OBE
57-25-1

THE RISE in consumer spending which has accompanied the advance in personal income has been the major influence in the continued uptrend in the value of total national output in recent months. Price advances continue to be a factor in the dollar-value increase, but, despite the mixed picture displayed in particular parts of the economy, the volume of national output remains at a high and stable rate.

Viewed in broad perspective, the current trends may be summarized in the following review of major business indicators.

1. Personal income continues to establish monthly records, and for the first 2 months of the third quarter (July-August) averaged 6 percent higher in dollars and about 2 percent more in purchasing power than in the same period of 1956. Higher wage and salary payments have been important in the increase this year. Employment in non-agricultural pursuits has remained high, changing little on a seasonally corrected basis in recent months, but recording an increase during the summer of 900,000 in comparison with a year ago.

2. The most important plus factor in the business situation at present is the record high rate of consumer spending, which has advanced in line with the flow of income. Practically all of the rise has resulted from higher outlays on nondurable goods and services. Aggregate sales of durable goods have shown little change so far this year, with variations in sales movements among individual products, but the aggregate dollar total has been somewhat above last year.

3. Business expenditures for plant and equipment, currently at a record high, are expected to level off during the second half of 1957 and to reach a total of \$37 billion for the year as a whole. This would exceed last year by 6 percent, adding a record amount of productive facilities. The latest OBE-SEC survey, the results of which are set forth in the adjacent chart, reveals that business expenditures for 1957 will show an increase in line with anticipations as reported by business early in the year, with no significant revisions of programs among the various major industries.

4. Investment in inventories has changed little so far this year, but here the major aspect for the general business pattern is the fact that inventory accumulation has been small in contrast to the substantial rise last year. This changed inventory policy of business has been a moderating influence tending to lessen the general pressure on prices. The volume of inventories has increased about \$1 billion at an annual rate since the beginning of this year, compared with the rate of rise of \$5 billion during the same period a year ago.

5. Housing construction likewise is currently stable, following the declines of substantial magnitude which occurred in 1956 and earlier in 1957. The value of residential building, as well as the number of housing units started, remains below a year ago.

6. Our foreign trade continues as a strong element in the business picture, although the stimulus derived by domestic business from the sharp rise in exports associated with the Suez crisis is not continuing. Net foreign investment, which increased sharply after the third quarter of last year, reached an unusually high annual rate of \$4 billion in the first half of this year. The high ratio of exports to imports in the first 2 quarters may decline in the third. This feature of the current business situation is reviewed in an article in this issue.

7. Purchases by State and local governments continue their steady rise which, for some time, has averaged around one-half billion dollars per quarter at an annual rate. Federal Government purchases, which have been increasing moderately since the spring of last year, are now tending to level off.

MAJOR RECENT DEVELOPMENTS

Personal income moved up in August to a seasonally adjusted annual rate of \$347½ billion, an increase of \$1 billion over July.

The rate of individual income flow in August was \$5 billion, or 1½ percent, above that for the second quarter of 1957. This advance was closely in line with the average quarterly increase in personal income which has taken place over the past 2 years.

Approximately half of the rise in total income from July to August occurred in wages and salaries, and the remainder was spread among a number of other categories. With seasonally adjusted nonfarm employment again showing little variation, the overall rise in payrolls was due largely to a further increase in wage rates.

On an industry basis, August payroll changes conformed generally to the pattern established in prior months of the year: fairly stable payments in manufacturing and increases in other private industries and in Government. In manufacturing, the effect of gradually declining employment this year, as well as of somewhat lower average hours of work, has been offset by higher wage rates. In most other industries, rising employment and wage rates have acted together to account for payroll advances.

Consumer purchases rising

Consumer demand for goods has been an important element of strength in the economy in the recent period. The advance in total sales at retail stores this summer fully matched the rise in disposable personal income to bring retail trade activity to a new high.

Retail sales in July and August 1957, seasonally corrected, were higher than in the second quarter, and well above the corresponding period a year ago. While prices have continued to play an important role in the dollar rise, more than half of the relative gain over a year ago represents an increase in the volume of sales.

Dollar sales of both durable- and nondurable-goods stores set new records in the July-August period, with both groups showing advances over the same 2 months of 1956 and the second quarter of this year. Nondurable-goods store sales have risen in each successive month of 1957. In the durable-goods group, sales began to rise after April following some decline in the earlier months of the year.

Sales movements by lines of trade

The dollar sales of the retail automotive group reflect the higher prices of this year's models, and a larger amount of other business. Unit sales of new cars continue to run slightly below the 1956 results, with record inventories being

carried into the period of clean-up and transition to 1958 models, the production of which will be under way on a considerable scale in October.

Farm implement dealer sales have moved up from the low point of the long decline which extended through the middle of 1956.

Sales of the lumber, building, and hardware group in the July-August period were under a year ago, continuing the recessionary pattern associated mainly with the drop in new housing construction.

Sales by furniture and appliance stores have recently averaged about the same as in the corresponding period of last year. Demands for major household appliances have shown movements which have been divergent and offsetting in their influence on aggregate sales.

All the major nondurable groups have exhibited rising sales tendencies thus far in 1957 and are well above year-ago rates. The year-to-year gains this summer were largest for gasoline service stations, food stores, and drug stores. In the July-August period, sales of general merchandise stores, eating and drinking places, and apparel stores were up about 5 percent over 1956.

Retail sales related to income

The ratio of retail store sales to disposable income has moved upward from an average of 66 percent for 1956 as a whole to about 68 percent in the summer of 1957. Most of this increase in the retail store share of the income dollar has occurred in the nondurable-goods trades.

Among the nondurables, food stores, gasoline service stations, general merchandise, and drug stores showed increases in the ratio, while sales of apparel stores and eating and drinking places changed little relative to income.

In the durable-goods categories, declines in the sales-income ratios for the furniture and lumber groups tended to offset most of the rise shown for the automotive group.

Plant and equipment investment steady

The rise in plant and equipment expenditures that has been in progress for 2½ years is expected to level off at very high rates in the latter part of 1957. Reports submitted by businessmen in late July and August in the OBE-SEC survey indicate an anticipated seasonally adjusted annual rate of expenditures of \$37.2 billion in both the third and fourth quarters of this year. Actual spending in the second quarter was at a \$37 billion rate.

Investment in manufacturing industries is expected to change little, after seasonal adjustment, from the first to the second half of 1957. Increases over this same period have been scheduled by electric and gas utilities, railroads, and transportation other than rail. Investments by the commercial and mining industry divisions are expected to decline.

If businessmen carry through with their current anticipations, spending for the full year 1957, as already noted, will total \$37 billion—about \$2 billion, or 6 percent, more than the record outlay in 1956. A major part of this increase reflects the advances which have occurred in construction costs and equipment prices, but none the less business will put in place this year a record volume of new facilities of the latest design, and of improved efficiency.

Stable inventory picture

In most lines of business, producers and distributors alike in 1957 have found stocks of goods on hand adequate to meet their requirements. The comparative absence of stringencies in the supply situation and hesitancy in many price lines in

wholesale markets are among the factors which have led to purchasing being placed largely on a "when-needed" basis.

This conservative buying policy adopted by business early in the year contrasts sharply with the situation in 1956, when inventory demand was an important market factor. Inventory expansion reached its height during the fourth quarter of last year. The rise in book values of business inventories continued in 1957 but at a very much reduced rate, and rising prices have meant that the volume of inventories has increased very little. The shift away from substantial inventory building characterized both manufacturers' and distributors' stocks.

In the case of producers' stocks, the changed tempo has

centered in the durable-goods industries. Changes among nondurable-goods industries have been relatively small.

In the heavy goods sector, the contrast between 1957 and 1956 movements can be traced largely to the machinery and transportation equipment industries. In these groups, the rapid expansion of materials on hand was sharply curtailed around the turn of the year. The rise of \$1 billion in book values in the second half of 1956 gave way to an increase of one-half billion dollars in the first half of 1957. Reduction in inventory accumulation occurred also in other durable-goods lines, but to a lesser degree than in the two industries which had accounted for the bulk of the manufacturing inventory buildup in 1956.

Industrial Pattern of 1957 Capital Investment

INCREASES in business capital investment in 1957 over the year 1956 are expected in manufacturing, railroads, and public utilities. Little change is anticipated in mining and nonrail transportation, whereas a decrease is projected by the commercial group. (See table 1.)

Manufacturing investment at peak

Manufacturers anticipate a \$16.2 billion outlay in 1957—8 percent above 1956. This year again, most manufacturing industries are increasing capital expenditures. On a seasonally adjusted basis, durable-goods manufacturers as a group expect their expenditures to hold to a peak rate in the summer quarter, edging down in the last 3 months of the year, while nondurable-goods producers in the aggregate expect their spending in the second half to change little from actual first and second quarter rates.

Durable-goods industries

Last year every major durable-goods industry increased its outlays by one-third or more. This year very large increases appear in the programs of steel, nonferrous metals, and transportation equipment (other than motor vehicles), while the stone, clay and glass industries anticipate a drop.

The doubling in outlays by nonferrous metals producers reflects chiefly the very large expansion programs of aluminum producers. Last year's new additions and those scheduled for this year and 1958 will raise primary aluminum capacity by more than one-fourth over that as of the end of 1955. The 1958 scheduled additions, now under construction, are two-thirds again as large as the new capacity scheduled during 1956-57. There has been no appreciable change in the short-term programs of other nonferrous metals producers.

The 15-million-ton steel expansion program is also well

under way. More than 5 million additional tons of ingot capacity were added last year and another 7½ million is scheduled to come in this year, in addition to raw materials and finishing facilities.

New Plant and Equipment Expenditures

Total in 1957 expected to be 6% above 1956

* Third and fourth quarters of 1957 anticipated by business

Data: SEC 8 OBE

U. S. Department of Commerce, Office of Business Economics

57-25-2

The machinery industry groups—both electrical and other—are showing continued rises in their capital spending this year. Motor vehicle manufacturers report a 30 percent drop in their 1957 outlays to \$1.2 billion, following a 50 percent rise in 1956. In only 1 of the 4 years since 1953 has spending by automobile manufacturers moved in the same direction as manufacturing and overall plant and equipment expenditures. The effect, of course, has been to dampen decreases—as in 1954—and to moderate increases—as in 1955 and this year. Last year's large programs of the automobile makers were an important contributory factor in the advance of nearly a third in total manufacturing investment.

Investment strong in chemicals

Nondurable-goods manufacturers expect a 9 percent increase in investment over last year. The largest relative advance in investment from 1956 to 1957 is an increase of almost one-fourth in expenditures by chemicals producers—to \$1.8 billion—with a strongly rising trend throughout 1957. Oil companies show a 9 percent advance over 1956 to \$3.4 billion, but there are signs of leveling in the second half. Stocks of gasoline have been high since spring, and this is one factor that has had a temporarily adverse effect on drilling programs of the integrated refiners; fewer wells are being drilled this year than last. Smaller-than-average increases are seen in outlays by the food and beverage, paper, and rubber industries—the last two following large gains last year—while textile firms show a decline of 15 percent.

Capital Outlays by Industry Groups

(* Includes third & fourth quarters anticipated by business)

Data: SEC & OBE

Rise largest in public utilities

Of all the major industry divisions, programs of the public utilities show the largest rise in 1957, about one-fourth.

In electric utilities, the recent rise in capital outlays, which began in early 1956, extends through 1957. After seasonal allowances, expenditures in the final quarter of the year are scheduled at a rate almost 60 percent above their recent low point in the fourth quarter of 1955. Early this year, trade sources had indicated that private power companies would add more than 7 million kilowatts of new capacity in 1957, and would make further additions of almost 14 million in 1958.

Gas utility expenditures from late 1955 through 1956 were on a high plateau. Nineteen fifty-seven has witnessed a stepping up in capital outlays with further rises scheduled for the second half of the year.

Railroad programs

Railroad expenditures are scheduled to reach \$1½ billion this year, as compared with last year's figure of \$1.2 billion. The rise over 1956 is almost exclusively in equipment, which is expected to make up over 70 percent of this year's total, as compared with two-thirds in 1956.

The fourth-quarter anticipation by the railroads suggests some edging off from the peak rate scheduled in the summer months. This may reflect the fact that railroad net income had been comparing favorably with year-ago figures up to the first quarter of 1957 but more recently has been falling behind. The freight car program has been at the core of recent investment of the roads. At midyear, car backlogs were about one-fourth lower than they were in the previous year, and represented 10 months of installations at the high monthly rates that prevailed in the second quarter. Installations of diesel locomotives have been running below 1956 rates.

Other nonmanufacturing investment

Divergent trends characterize the other nonmanufacturing groups. Although the 1957 expenditures for mining as a whole are unchanged from 1956, this is the result of reductions in spending by iron ore, petroleum and gas companies which offset increases by firms in coal mining and in stone, sand and gravel.

In nonrail transportation, increased outlays by the airlines, marine transportation, and oil pipelines are offsetting declines in the motor carrier field. The airlines, as is well known, have very large equipment orders outstanding.

In the commercial and other field, the 8 percent decline from 1956 to 1957 reflects decreased spending by trade and construction firms, offset in part by an increase in outlays to a new peak by the communications industry.

Defense Facilities Program

Last month the President signed into law a bill providing for the end of the Government's program of rapid tax amortization by December 31, 1959. The law also limits the granting of new certificates in the interim to ODM-approved capital facilities built to fulfill Defense Department and AEC contracts and research and development facilities for direct defense.

Between 1950 and the middle of this year, certificates had been granted to facilities totalling over \$38 billion, with some \$23 billion subject to rapid amortization. The estimated total value of facilities granted rapid amortization

privileges, according to the Office of Defense Mobilization, by years, is as follows:

(Billions of dollars)

Year	Total	Year	Total
1950.....	1. 4	1954.....	1. 9
1951.....	10. 6	1955.....	3. 7
1952.....	13. 3	1956.....	4. 1
1953.....	5. 0	1957 (1st half).....	1. 2

There has been a considerable shift in the industrial distribution of certificates over the period shown in the table, and in some industries certificates have covered a significant portion of investment in recent years. In the Korean period, most certificates were issued for manufacturing facilities. From the beginning of 1955 to mid-1957, on the other hand, more than half of the value of facilities for which certificates have been granted has gone to railroads and public utilities, while the manufacturing share has been small. These certificates have totaled \$2.1 billion in the case of the railroads and \$3 billion in the case of public utilities, or about two-thirds and two-fifths, respectively, of total gross fixed outlays made in these industries in the same period.

1. Data exclude expenditures of agricultural business and outlays charged to current account.

2. Estimates are based on anticipated capital expenditures reported by business in late July and August 1957. The seasonally adjusted data include in addition to a seasonal correction, an adjustment when necessary, for systematic tendencies in anticipatory data.

3. Includes fabricated metal products, lumber products, furniture and fixtures, instruments, ordnance, and miscellaneous manufactures.

4. Includes apparel and related products, tobacco, leather and leather products, and printing and publishing.

5. Includes trade, service, finance, and construction. Figures for 1957 and seasonally adjusted data also include communications.

Note.—Data for earlier years were published in the June 1956 *Survey of Current Business*, page 6.

Financing the Expansion of Business

DEMANDS of business for capital funds have continued at a high rate in 1957. With the maintenance of exceptionally large investment requirements elsewhere in the economy, pressures on the markets for funds remained heavy throughout the first half of the year. Interest rates rose to new highs for the postwar period, and monetary authorities continued their policy of credit restraint in an effort to contain the large demands for borrowed funds.

Terms of equity financing remained favorable for corporate business during the first half of 1957. With common stock prices and corporate earnings little changed from their 1956 average, the cost of equity financing as reflected in the ratio of profits to stock prices was at about its postwar low. While more recently stock prices have receded from their summer high, they still compare favorably with the averages for prior years.

Internal funds available from current operations showed some further net expansion in the first 6 months of this year as compared with the 1956 rate. With continuing growth in the volume of fixed assets, on which accelerated amortization was generally available, depreciation allowances provided increased funds for expansion purposes. Corporate earnings did not differ much from the year-before rate as sales were moderately higher but margins were reduced. Dividends move up, however, and a lessened share of current profits was available for reinvestment purposes.

Although internal funds have been somewhat larger this year, the bulk of the increase in corporate long-term capital requirements has been obtained from external sources. The amount of equity raised from outside sources in the first 6 months of 1957 was the largest for any comparable interval in the postwar period. However, such financing has continued to supply a relatively low proportion of total corporate requirements. Borrowing again has been the principal source of external funds for corporate business.

New data on industry patterns

Background for the 1957 financial experience of corporate business is contained in table 1, which presents a summary view of the funds used and the sources from which these were drawn in 1956 and earlier years. In addition, tables 2 through 6 present for the first time data of the same type for several broad industrial divisions of the economy. Although it is not feasible at this time to provide annual series for the industry groups covered in these tables, the figures shown for the decade 1947-56 and for 1956 separately depict the major industrial patterns of postwar financing. The light which these figures shed on the differing industry experience will be reviewed in the second part of this article.

Corporate Financing in 1957

RECENT long-term financing requirements of corporate business are highlighted in the accompanying chart, which shows for all nonfinancial corporations the use of funds for fixed and net working capital purposes in the first 6 months of each of the last 3 years, and the principal sources utilized in financing these needs.

As described earlier in this issue of the *SURVEY*, business invested a record total in plant and equipment during the first half of 1957. The corporate share of these expenditures amounted to more than \$15 billion—about \$1½ billion, or 12 percent, above outlays in the first 6 months of last year. In addition, corporations raised about \$3 billion in long-term funds to finance additions to net working capital (the excess of current assets over current liabilities). This latter requirement was not quite so large as in early 1956, so that total long-term requirements of roughly \$18 billion in the first half of this year were about \$1 billion over the previous first-half record reached last year.

The principal features of working capital changes in 1956 and 1957 may be summarized as follows:

NOTE.—MR. LIEBLING IS A MEMBER OF THE NATIONAL ECONOMICS DIVISION, OFFICE OF BUSINESS ECONOMICS.

1. In contrast to last year, when corporations were adding to their inventories at a fairly rapid rate, changes in inventory holdings in the first 6 months of this year were largely seasonal in nature. Thus, the book value of corporate inventories rose by about \$2 billion in the first half of 1957, contrasting with an increase of over \$5 billion in the comparable 1956 period. Most of this change from 1956 to 1957 was accounted for by manufacturing firms.

2. Customer receivables financing also appears to have been less of a factor in corporate requirements in 1957 than in the first half of 1956 when book credit extended to consumers and unincorporated business firms was expanded by \$3½ billion.

3. In the past several years, Federal income tax payments have been seasonally high in the first half of the year, exceeding tax “set-asides” by a wide margin. In 1957, however, the tax drain was not so pronounced as a year ago. In large part this was because of the accelerated tax payment program now under way to put corporations closer to a pay-as-you-go basis and to equalize payments throughout the year.

In 1956, the larger corporations which account for the major share of total profits tax liabilities paid 20 percent of the currently accruing Federal profits taxes in the second half of the year, as against 10 percent in 1955. The proportion is scheduled to be 30 percent this year, and by 1959 corporations will be paying their taxes in four more or less equal installments beginning in September of that year.

4. There was some letup in corporate short-term bank borrowing in the first half of 1957, no doubt reflecting in large part somewhat lessened working capital needs. The dampened trend in use of bank funds was also attributable to the Federal Reserve's policy of credit restraint.

Available data suggest that most of the major manufacturing groups have reduced their 1957 bank credit demands from the exceptionally high rate of borrowing in 1956. The slowing of the rate of increase has been most pronounced in the case of metal manufacturers. Trade concerns also

borrowed less in the first half of this year than in the same period a year ago. On the other hand, the sales-finance company and public utility groups made greater use of bank facilities in 1957.

In the case of finance companies, the substantial increase this year contrasted with a net liquidation in the first half of 1956, when these companies were in the process of funding shorter-term loans. The increase in utility borrowing has been exceptionally large throughout the last year and a half.

5. In the first half of 1956 corporations drew down their liquid assets—by almost \$8 billion—in meeting their heavy current and fixed capital needs. Such liquidation also occurred this year, but on a lesser scale—around \$5 billion which was more in line with existing seasonal requirements.

It will be recalled that in the calendar year 1956 corporations sold \$4.7 billion of U. S. Government securities to help provide the necessary funds for business expansion. This sell-off, following a sizable accumulation of Government securities in 1955, explains the sharp reduction in the net accumulation of corporate financial assets in 1956 as compared with 1955 (table 1).

The classification used in table 1—that of treating changes in assets as “uses” and changes in liabilities and capital accounts as “sources”—is probably most suitable for time-series analysis. However, in evaluating what happened in the business upsurge of 1956 and 1957 a more meaningful picture of events is obtained by treating the reductions in liquid assets for what they were, namely, the source from which additional funds necessary to finance corporate business expansion was derived. Furthermore, the treatment of recent changes in Federal income tax liabilities may also be reversed from that of table 1 for the same reason.

Understanding of the changes from 1955 to 1956 is furthered by the rearrangement of the data for those years given in the accompanying table.

Corporate Financing

Higher long-term capital requirements in the first half of 1957 . . .

Data: OBE based on SEC & other financial data

[Billions of dollars]

	1955	1956
The uses of funds:		
To increase physical assets.....	29.2	37.8
To increase customer receivables and miscellaneous assets.....	10.9	7.9
Subtotal.....	40.1	45.7
To increase liquid assets in 1955.....	4.7	-----
Payments on Federal income taxes in excess of tax accruals in 1956.....	-----	1.5
Total used.....	44.8	47.2
The sources of funds:		
Retained profits and depreciation.....	24.0	24.8
From outside sources.....	18.8	18.6
Subtotal.....	42.8	43.4
From reduction of liquid assets in 1956.....	-----	4.0
From Federal income tax accruals in excess of payments in 1955.....	2.8	-----
Total sources.....	45.6	47.4

(The total funds used should, of course, equal the sources of financing; the small discrepancies evident are due to inadequacies in the estimating materials.)

Unlike last year, when corporations were able to add to

their normal sources of funds by liquidating some of their U. S. securities, thus far in 1957 this source appears not to have been a significant factor, after allowing for seasonal influences. This may explain, in part at least, the increased dependence of corporate firms on external sources in 1957.

Long-term financing in record volume

As may be seen from the lower half of the corporate financing chart, the amount of long-term funds raised by corporate business in the first half of this year was greater than in either of the past 2 years of generally high and rising investment outlays. The major share of additional long-

term capital needs was derived from sales of new securities.

The net inflow of funds from bond sales in the first 6 months of this year amounted to \$3½ billion, about \$1 billion more than in the comparable period last year. Funds realized from net new stock issues in the 1957 period amounted to \$2 billion, compared with a \$1 billion realization in each of the half-yearly periods of 1955 and 1956.

Depreciation allowances have continued to mount, reaching an annual rate of about \$18 billion in the first half of 1957, \$1½ billion above a year ago. On the other hand, retained earnings, which are currently at an annual rate of around \$8 billion for nonfinancial corporations, have tended downward over the past 2 years.

Postwar Industry Differences

THE INDUSTRY groups covered in tables 2-6 accounted for over \$293 billion, or 90 percent, of funds used by non-financial corporations in the past decade.¹ Outlays on plant and equipment made up two-thirds of this total. It is of interest to note that, while the proportion of fixed capital spending is large for all corporations, there is much variation among the major industries, as shown in the chart.

At one extreme stand the public utility-communications group and the railroad industry, in which outlays on fixed facilities account for practically all of capital requirements. Over the postwar decade, railroads used roughly \$12 billion for fixed facilities, but on a net basis used practically no additional funds for working capital purposes. Working capital was of only slightly greater relative importance in the requirements of the utility and communications groups, accounting for less than one-tenth of the total.

At the other extreme is the corporate trade group, in which fixed capital outlays of \$15 billion accounted for only slightly more than one-third of their total requirements. In the distributive industries, financing of customer receivables required almost as much as spending on fixed facilities, and inventory financing was of only slightly less importance. In the 10-year period, trade corporations also added to their liquid assets to a somewhat greater degree than other industries.

While working capital requirements are of special importance in trade, it may be noted that the figures for this industry probably tend to understate, relative to other industries, the significance of spending on fixed facilities used in distribution. This results from the fact that store and warehouse facilities are frequently rented and, in such cases, expenditures for modernization and expansion are classified in other industries, notably in real estate.

Manufacturing corporations present a pattern intermediate between the utility groups and trade. Reflecting this, as well as the fact that manufacturing accounted for roughly half of all nonfinancial capital requirements in the postwar period, the financing pattern for manufacturers closely resembles that for all industries.

Manufacturing and mining corporations' plant and equipment outlays in the 1947-56 period amounted to over \$110 billion, or almost two-thirds of total capital requirements. An additional \$29 billion, or 17 percent of the total, was used to finance inventories, and \$24 billion, or 14 percent, was involved in financing customer receivables. As was the case generally, additions to manufacturers' liquid assets were extremely modest for the postwar period as a whole, accounting for less than \$10 billion, or 5 percent of total uses. It is to be recalled in this connection that as a result of wartime developments corporations entered the postwar period in an extremely liquid position, which permitted a very considerable expansion of business without a corresponding need for drawing upon outside resources.

Industry sources of financing

Three-fifths of all capital funds used by corporate business in the postwar period has been derived from internal sources, i. e., retained earnings and depreciation allowances. An additional one-fifth has been raised in long-term markets, with debt issues predominating, while the remainder has involved increases in short-term debt, principally accounts payable and bank debt.

The new data presented here show wide variations in the pattern of postwar financing among different industries. For example, table 2 shows that in the 1947-56 period railroads depended on internal sources for almost 80 percent of requirements, with retention of earnings and depreciation allowances each contributing roughly equal amounts. Trade concerns also depended more heavily than average on internal financing, which accounted for roughly two-thirds of total funds raised by these corporations. The role of internal financing in manufacturing and mining again was about the same as for industry in the aggregate.

The regulated public utility and communications industries were least able to draw upon internal sources, which supplied only 30 percent of total requirements. Both depreciation allowances and profit retentions in these industries were below the all-industry average relationship, and particularly striking was the small role played by reinvested earnings. The rates charged by these industries are regulated by Government bodies and they have not duplicated the earnings records of business as a whole. Both of these industry groups normally do not have large retained earnings and depend upon external sources for whatever financing is needed in excess of depreciation allowances.

¹ It is not feasible at this time to construct a "sources and uses" account for the noncovered groups, either separately or in combination. One should not attempt to derive such an account by deducting the covered groups from the aggregate shown in table 1. In the first place, real estate operators are not consistently covered in the sources and uses accounts, being omitted altogether in the OBE-SEC plant and equipment figures incorporated in this study. This situation does not substantially affect the analysis of either the aggregate picture or the industry detail presented in this article, but would seriously distort figures for the noncovered industries derived by residual computations. As a further consideration, such computations might also reflect errors in the estimates to a magnified degree.

Public utility and communications companies raised over 50 percent of their postwar requirements in the new securities markets, in contrast to proportions of less than one-fifth for all industries combined, one-tenth for manufacturing, mining, and nonrail transportation, 3 percent in the case of railroads and a negligible ratio in trade. Of the funds raised in the new issues markets by the communications industry, two-thirds took the form of equities—practically the reverse of the experience for the utilities group which relied more heavily on long-term borrowing.

In this context, it may be noted that in the original financing transactions through which funds were raised by the communications group debt issues were used to a much greater extent than indicated by the one-third ratio just indicated. A large fraction of these debt issues, however, included conversion-to-stock features, which, when acted on, served to raise the amount of equity funds obtained.

Differences in investment program emphasis are broadly reflected in the industrial use of short-term credit. Whereas only 5 percent of total requirements of the utilities and railroads were covered by short-term debt in the 1947-56 dec-

ade, such borrowing accounted for a fourth of needs in the case of trade corporations, for which additions to inventories and customer receivables are customarily important requirements. The major part of short-term debt utilized in the trade group takes the form of book credit extended by manufacturers and other suppliers of merchandise. This type of credit, it may be added, has become increasingly important in the recent period under the policy of restraint exercised by the central bank authorities.

Bank loans do not loom especially large in the overall financing picture for most corporations, with the proportion of such loans to total requirements varying from less than 2 percent in the communications industry to 8 percent in trade. Of course, as a proportion of total external financing, bank borrowing is much more important. Bank loans were one-fourth of total external funds raised by trade concerns, and one-fifth or less of external requirements in industries other than the utilities-communications groups. In the financing of the latter firms bank loan expansion accounted for less than 5 percent of total outside funds obtained in the postwar period.

Changes in industry financing

The cumulated data on capital funds as presented in table 2 serves to characterize financing by industry in the postwar decade as a whole. In the attempt to note major shifts within this period, table 6 presents data on industry financing for the first and second halves of the postwar decade, as well as for 1956 alone.

By way of background, it may be observed from table 1 that corporate requirements have been exceptionally high in recent years. Funds used in 1955, 1956 and, as far as can now be determined, in 1957 have been in record or near-record volume, approached or exceeded on an annual rate basis only in 1950 when inventory and other working capital requirements were sharply expanded following the outbreak of Korean hostilities.

Throughout the postwar period, outlays for plant and equipment were almost continuously expanded, the only major exceptions occurring during 1949 and 1954. On the other hand, rather pronounced swings took place in working capital requirements. Note, for example, the \$28 billion increase in current assets in 1950, in contrast to the negligible advance in 1949 and the \$2 billion reduction in 1954.

The fairly steady climb in fixed capital outlays and the variable working capital requirements over the postwar period tend to dominate the differential changes in industrial patterns of capital uses. That is, those industries in which working capital needs are important show widely varying use patterns—notably in manufacturing and trade. Where working capital requirements were relatively low,

57-25-6

as in the broad utilities groups, the tendency toward greater stability in this regard was clearly evident.

Whereas total funds used in the second half of the postwar decade were only slightly higher than in the first half, demands for funds by the utility and communications companies were increased by roughly one-half. On the other hand, trade corporations required one-third less capital

funds in the second half of the decade. This was due almost entirely to the reduced need for inventory expansion following the major rebuilding of stocks in the early postwar years and the exceptional accumulation of the Korean period.

While manufacturing corporations used about equal sums in each 5-year period, in most respects their changing requirements resembled that of distributive industries, with needs for inventory expansion cut sharply in the second part of the decade.

There was one striking difference which set the manufacturing industry apart from all other groups. With the rather sharp reduction in liquid assets in 1956, manufacturers' total holdings of these assets at the end of that year were moderately lower than 5 years previously. This was in contrast to a quite sizable accumulation in the preceding 5-year period. For most other industry groups, there was little difference between the relatively small additions to liquid assets in the two intervals.

Shifts in financing

Throughout most of the postwar period, internal financing provided the major, and indeed growing, share of financing for most of industry. It is of interest to note that in public utilities, nonrail transportation, and railroads the 1956 proportion of internal funds exceeded the average for the preceding 5 years. On the other hand, reductions in the internal share of financing used in manufacturing and trade brought the 1956 experience into line with the average for the decade.

A fairly heavy use of internal funds in the more recent 5-year period occurred despite the lessened relative importance of retained earnings. Only in the case of railroads was the share of retained earnings increased from the first to the second 5-year period.

Declining share of retained earnings

The wide industrial divergence in the relative importance of retaining earnings in corporate financing and the generally declining postwar trend in its contribution to total needs call for additional comment. Attention has already been drawn to the relatively small amounts of funds available from earnings in the regulated utility-communications group. The ratio of dividends to earnings amounted to nearly 90 percent for the utilities, and to 80 percent for communications. In contrast, trade concerns paid out about one-third of postwar earnings, manufacturers' dividends accounted for 45 percent of after-tax profits, and in the transportation industries the ratio ranged around the postwar average of close to 50 percent for all industries combined.

The tendency noted above toward a reduced relative importance of retained earnings in most industries' financing reflects in considerable degree a gradual move away from low dividend payment ratios. These stemmed from war-induced developments and were also in part a legacy of financial troubles in the thirties, as most corporate executives carried over at least into the early postwar years a determination to establish comfortable equity cushions. The almost

continuous prosperity of the past decade and its concurrent rebuilding of plant and equipment slowly brought a higher pay-out to stockholders. Even at the present time, however, the dividend-earnings ratios of most industries, other than the utilities, remain conservative in historical perspective. It should be noted that these relatively low postwar dividend payments have permitted a substantial buildup of equity funds, tending to offset in part the impact on corporate financial structures which was involved in the rapid upsurge of postwar borrowing.

The rise in depreciation

The rapid postwar rise in depreciation allowances which was general throughout industry reflects both basic factors and special influences related to tax law changes. Depreciation allowances were fairly low at the start of the postwar period. As the record-breaking postwar spending program proceeded—generally speaking, involving greatly expanded physical capacity purchased at rising costs—the depreciable asset base and depreciation allowances were steadily increased.

The rapid amortization provisions of the 1950 revenue law gave a special impetus to depreciation allowances. This was concentrated in the heavy goods manufacturing industries, public utilities, and railroads, where the defense-related expansions predominated. The excess of these accelerated allowances (now at or close to their peak) over the amounts determined by permitted alternative methods

of computation accounted for roughly \$2 billion, or over one-eighth of total depreciation in 1956. With the peak effect of this program already reached, this stimulus to rising allowances will be replaced over the next several years by a deceleration impact as facilities operating under the program become fully amortized.

This particular and changing influence on depreciation funds is currently being largely offset by the generally applicable provisions of the 1954 law, which permits the charging off of new capital assets at a substantially more rapid rate than was generally allowed under prior provisions. The allowances claimed under the 1954 provisions amounted to somewhat less than \$1 billion in that year; they are estimated to have been in excess of \$3 billion in 1956. Of the more than \$2 billion rise in 1955 and 1956, about half represents the increment over depreciation computed on a straight line basis.

The influence of these newer allowances will continue to be felt for some time as older—pre-1954—assets wear out

and are replaced by new assets eligible for faster write-offs. The phasing and quantification of the impact of this influence cannot, however, be determined at this time.

Industry trends in external financing

Among the nonfinancial corporations, the new issues markets are dominated by three industry groups: communications, utilities, and the larger manufacturing concerns. All three maintained their relative use of these markets throughout the postwar period, as based on totals for the half-decade intervals. There were, however, several interesting variations not revealed by these 5-year averages.

Manufacturers were fairly heavy users of the new issues market during the early postwar years, with total issues in the 1947-48 period approximating \$1.8 billion a year. In the letup of capital requirements of 1949 and 1950, manufacturers practically withdrew from these markets, only to re-enter on a large scale as financing pressures grew under the impact of Korean developments. Subsequently, manufacturers reduced their dependence on external financing until the resurgence in the 1955-57 period. It was only in this recent period that new issues exceeded those of the early years, and they are still less important than in 1952.

The volatility of new-issues demands by manufacturers is in sharp contrast to the rather steady expansion by gas and electric utility concerns. Throughout the postwar decade, new debt issues by these utilities have ranged around \$1½ billion a year and their stock issues have brought in about three-quarter billion dollars a year.

With the exception of 1947-48, new debt issues of the communications groups have moved within a range of from a small net liquidation in 1950 to increases of about \$400 million in the last 2 years. Stock issues, on the other hand, have yielded a net inflow of \$1 billion a year since 1954, in contrast to a net inflow of less than half that seen in the early postwar years.

Short-term credit changes

Because of the extremely volatile nature of short-term credit demands, it is not feasible to attempt any generalization as to postwar trends on an industry basis. Extension of book credit by manufacturers has varied substantially from year-to-year during periods of business expansion. In the recession of 1948-49 some liquidation of these accounts occurred, but since that time the movement has been generally upward. The pattern was equally erratic in the trade group.

Bank borrowing has been almost continuously upward throughout this postwar period except in 1949 and 1954. The recent use of bank credit has been exceeded in the postwar decade only during the Korean period.

CURRENT FINANCIAL POSITION

Practically all established businesses entered the postwar period in an extremely liquid position, and this has been a prime factor in facilitating business expansion. Cash and near-cash resources had been accumulated as a result of financial conditions in the war years, including the restrictions on investment. A substantial volume of debt was liquidated during the war, and much of the remaining indebtedness was subsequently refinanced on the extremely favorable terms prevailing in the early postwar years.

With the greater part of war-induced excess liquidity eliminated by the early fifties, the removal of the peg on costs of long-term borrowing in 1951, and the steady and general advance of business indebtedness, the financial position of most business firms has altered.

Industrial liquidity patterns

Most of the industry groups studied appear to have reached a liquidity position by 1951 or 1952 which they maintained in

Corporate Interest Payments as a Percent of Income*

* Profits before tax plus interest, nonfinancial corporations

rather stable fashion through 1955. The principal exceptions to this pattern were the communications group, in which the ratio of liquid assets to sales improved through 1955, and the public utility group, where a further decline was noted through 1956.

Corporate Financing Costs

Data: OBE based on Moody's & Cowles Commission

U. S. Department of Commerce, Office of Business Economics

57-25-6

The 1956 reduction in liquid assets, which was general throughout industry, brought the ratios of these assets to sales to the lowest point of the postwar period in manufacturing, nonrail transportation and public utilities. However, even in these industries, the recent liquidity positions were not exceptionally low in historical perspective. On the other hand, it would appear that many industrial concerns are no

longer in a position in which owned liquid resources can be used extensively to meet investment needs.

Debt servicing charges relatively low

As in the case of the private economy in general, corporate business has financed a major share of its postwar expansion program from use of borrowed funds. Over most of the past decade, the use of such funds was fostered by exceptionally low borrowing costs. As may be seen from the chart on this page, the postwar average cost of borrowed funds was low not only in relation to equity financing costs as represented either by the earnings-price ratio or dividend yield on common stocks, but also well below interest costs in earlier periods of high level business activity. It should be noted, moreover, that allowance for the greatly increased Federal tax rates over this period would further widen the spread between the relative costs of debt and equity financing.

The spread between debt and equity costs has narrowed in the most recent period, both as a result of declines in equity yields and increases in interest rates. It will be seen from the chart that the cost pattern is very similar to that of the average for the 1920 decade. Interest rates are still below this prewar average, and so are equity costs as measured either by the earnings-price ratio or dividend yields.

Current bond yields on seasoned securities (such as constitute the basis for the figures in the chart) are still somewhat below dividend yields, the reverse of the experience in the twenties. In this context, however, it should be noted that yields on new debt issues in early 1957 were substantially—in some cases, almost one percentage point—in excess of yields on seasoned issues.

Though interest costs have risen in the recent period, the burden of corporate indebtedness as measured in terms of interest payments as a proportion of funds available for servicing these costs (profits before taxes and interest) is still relatively low. (See the chart on page 13.)

Several features of the industry patterns of these ratios are noteworthy. First is the relatively small proportion of interest to income in manufacturing. Interest accounts for roughly 5 percent of manufacturers' income (before deducting interest) at the present time, whereas the comparable ratio at the opposite extreme is 40 percent in the case of railroads.

Second, it may be noted that while most industry groups witnessed a postwar rise in the ratio of interest to income, there was actually very little net change in evidence in the broad utility grouping shown in the chart.

Finally, it should be cautioned that the charted data refer for the most part to periods of substantial prosperity. In the past the interest burden has proved to be quite volatile as a result of the residual nature of corporate income, which is especially sensitive to demand or cost fluctuations.

High Foreign Sales and Investments

Feature Second Quarter Balance of Payments

THE INTERNATIONAL trade of the United States continues as a strong element in the domestic economy, although a temporary peak in merchandise exports reached early in 1957 during the height of the Suez Crisis seems to have been passed.

Exports of goods and services rose to a seasonally adjusted annual rate of \$27 billion in the second quarter of this year, an increase of about \$3.5 billion over last year.

With the rise in incomes and production in the United States the higher demand for goods and services produced abroad lifted imports in the second quarter to \$20.5 billion at seasonally adjusted annual rates. In contrast to exports, however, the rise slowed down in the past year, with the increase over the second quarter of 1956 amounting to less than \$1 billion.

The short-lived hostilities in the Middle East and the temporary closure of the Suez Canal reinforced certain other developments which shifted the balance in all our foreign transactions (as measured by our purchases or sales of gold and the movement of liquid dollar assets held by foreign countries) from net payments averaging about \$400 million per quarter during the first 9 months of 1956 to net receipts of about \$300 million during the last quarter of 1956, and further to \$520 million during the first quarter of 1957. Although the developments underlying these changes contributed significantly to the rise in sales of domestically produced goods, the shift from an accumulation to liquidation of foreign reserves also added to inflationary pressures in this country.

Foreign losses reduced

In the second quarter of 1957 the balance on our foreign transactions changed back again to net United States payments of about \$70 million. Since these changes are in part seasonal, however, the quoted figures overstate the swings, but because of the unusual circumstances prevailing it is more difficult now, than usually is the case, to separate the seasonal from other influences.

An nearly as can be calculated from seasonally adjusting the various items of the balance of payments, the balance shifted from net payments by the United States averaging about \$350 million during the first three quarters, to net receipts of \$70 million in the final quarter of 1956, and to \$530 million in the initial quarter of 1957. During the second quarter there was a sharp drop in net receipts by the United States to about \$100 million.

Further adjustments need to be made to allow for payments of about \$300 million to Venezuela for oil exploration rights, including such payments by a foreign company from loans obtained in the United States. Without these payments which were fully reflected in the dollar assets of Venezuela, foreign countries appear to have lost about \$400

million during the second quarter after allowing for seasonal factors. This loss was still rather large, though not quite so severe as in the preceding quarter when it amounted to \$600 million (again after allowing for the special payments to Venezuela during that period). About \$100 million of this improvement may be attributed to smaller oil shipments required from the United States.

Net United States receipts from unidentified transactions also declined after seasonal adjustment by a significant amount (about \$170 million). This probably reflects a substantial diminution of unrecorded capital flows to the United States. The rise in net receipts from unidentified transactions was one of the major factors in the shift from an increase to a decline in foreign gold and dollar assets following the start of the Suez crisis. The decline during the second quarter may, correspondingly, be considered an indication of the dissipation of the immediate effects of the crisis.

Certain other developments, however, increased the net dollar demand on foreign countries in the second quarter aside from seasonal changes. These included a rise in United States income on foreign investments and a small decline in United States merchandise imports (after deducting about \$100 million of silver received from India and Pakistan in payment of a lend-lease loan during and immediately following World War II).

The less adverse balance of payments position of the foreign countries as a whole with the United States during the second quarter can also be appraised by the use of certain monthly data.

The movement in foreign gold and liquid dollar assets through transactions with the United States changed from

NOTE.—MR. LEDERER IS CHIEF OF THE BALANCE OF PAYMENTS DIVISION, OFFICE OF BUSINESS ECONOMICS.

a decline of \$43 million in April to a rise of \$8 million in May and of \$103 million in June. These amounts include about \$100 million deposited by Germany with the United States Government for the purchase of military equipment. Even omitting the large increase in dollar holdings by Venezuela, the balance of the rest of the world with the United States changed from a foreign loss of gold and dollars of about \$150 million in April to about \$90 million in June.

Merchandise exports passed peak

Merchandise exports (excluding military items), before adjustment for seasonal variations, increased from the first quarter by about \$50 million. Because exports were affected by many unusual conditions, it is difficult to adjust them for seasonal variations. But it is clear that seasonally adjusted exports at least did not rise. The figures shown in table 1 reflect approximately the middle of the range for various types of adjustment. It thus appears that merchandise exports, which had risen almost without interruption since the first quarter of 1954, reached a peak during the first quarter of this year.

Compared with the corresponding period of last year, nonmilitary exports during the second quarter of this year are up by about \$725 million, or about 16 percent. The 3½ percent rise in export prices accounts for about \$170 million of this increase. (However, export prices declined during the second quarter from the peak reached in the first.)

About \$100 million of the aggregate increase consisted of agricultural products. Cotton exports were up in value by more than \$100 million, but exports of foodstuffs were somewhat smaller.

Crude and semimanufactured materials comprised about \$420 million of the rise in exports from the second quarter of last year (including a \$100 million rise in petroleum). Finished manufactures (excluding military items), mainly machinery, accounted for about \$300 million.

Mixed trends in imports

Merchandise imports (excluding the silver received from India and Pakistan) dropped slightly from the first quarter, both before and after seasonal adjustment. The drop was more than accounted for by the decline in imports of coffee following rather high imports during the second half of last year. Other imports, according to unadjusted data reached a new peak during the second quarter. The rise in seasonally adjusted imports other than coffee, however, was not sufficient to compensate for the decline during the previous quarter, suggesting that imports remained below the previous peak which was reached in the fourth quarter of last year.

Compared with the second quarter of 1956 total imports increased by about \$60 million, or about 2 percent. Omitting imports of foodstuffs—which declined in value—the rise was about 5 percent, nearly the same rate as the rise in the gross national product.

The increase over last year was mainly in manufactured goods, particularly automobiles, imports of which more than doubled, and in nonagricultural machinery, which rose in value by about 25 percent. Imports of textiles remained unchanged from last year.

Among the crude materials and semimanufactures, imports of petroleum, iron ore, iron and steel mill products, aluminum, nickel and zinc increased over last year, but the imports of other major raw materials were smaller.

The increase in tourist expenditures was slightly more than seasonal, and thus made up for some of the unusual decline earlier this year.

Outflow of Government funds up

Military expenditures which increased sharply during the first quarter of the year remained high during the second quarter. Payments under offshore procurement contracts were responsible for most of the rise.

Government nonmilitary grants rose over the first quarter by \$100 million, of which \$50 million represents an increase in the use of foreign currencies acquired through the sale of agricultural commodities. Most of the \$100 million rise in grants accrued to various countries in the Far East, particularly Korea and Vietnam. Government acquisitions of foreign currencies through sales of agricultural products increased from \$385 million in the first quarter of this year to approximately \$440 million in the second. These transactions thus comprised about 30 percent of our agricultural exports during the first quarter and nearly 40 percent during the second. In addition, agricultural products were exported under other Government aid programs, both grants and loans.

Private investments reach new record

The net outflow of private U. S. capital in the second quarter reached \$1.4 billion—more than in any previous quarter. Only partially was the rise in direct investments due to seasonal factors. More important were the purchases of new concessions for oil explorations in Venezuela, which rose from about \$75 million in the first quarter to about \$250 million. In addition, large bank loans were made to a foreign company for similar investments. The capital outflow to Canada was increased through new issues of securities by major companies with large American interests, and by local governments. Although these two countries accounted for a large part in the outflow of private capital, investments increased in other countries as well. The outflow of short-term capital, which was comparatively high during the first quarter, declined however.

Area Breakdown

The changes from last year in the overall balance of payments reflect larger but to some extent offsetting transactions with individual areas.

Western Europe

Recorded United States payments to continental Western Europe during the second quarter of 1957 were about \$1,650 million, nearly \$90 million higher than during the corresponding period of last year. United States receipts, while still smaller than payments, increased about \$180 million. The net payments by the United States therefore declined from about \$140 million to about \$50 million. Although the countries in that area had a somewhat larger decline in their surplus with the United States than foreign countries as a whole, the change from last year was, nevertheless, not large in comparison with the magnitude of total transactions.

Merchandise imports from continental Western Europe increased \$70 million or nearly 1½ percent over the second quarter of last year. This rate of increase thus far exceeded the 2 percent rate of increase for merchandise imports as a whole, or the rate at which total incomes and the gross output of the United States expanded. Nearly half of the increase in imports came from Germany, and a very large amount from Turkey.

Military expenditures were \$27 million less than a year earlier. The decline was somewhat larger for France alone, but expenditures in Germany increased.

The outflow of funds through Government nonmilitary grants and capital also declined slightly, but capital transactions comprised a larger share of the total as increased amounts of foreign currencies were acquired through the sale of agricultural products.

Private United States investments in continental Europe during the second quarter of 1957 were considerably higher than a year earlier. However, at that time direct investments were exceptionally low, and the net capital outflow for such investments during the second quarter of this year was approximately at the same rate as for last year as a whole.

Merchandise exports to continental Western Europe declined about \$140 million from the first quarter of this year, but were still about \$160 million or 14 percent higher than in the second quarter of last year. The decline in exports from the first quarter reflects the return to more normal trade relations since the opening of the Suez Canal. The rise over last year was due in part to the continuation of extraordinary oil shipments into the early part of the quarter, and in part to higher exports of coal. In part, however, it also reflects the increased requirements for certain raw materials, especially cotton, resulting to some extent from the desire for higher inventories but mainly from the continued rise in industrial production and incomes in that area.

About \$100 million of the rise in exports from the second quarter of last year to the second quarter of this year was taken by Germany and Italy. The remainder was distributed among several countries in that area.

Transactions with the United Kingdom resulted in an increase in net payments by the United States from about \$70 million in the first quarter to about \$160 million in the second. The increase in payments over the first quarter was partly due to the seasonal rise in tourist expenditures, and partly to a higher outflow of capital some of which was reinvested outside of the United Kingdom. Purchases by the United Kingdom in the United States declined substantially from the first quarter as oil supplies from the Middle East became available again, but the second-quarter balance of payments figures still reflected some of the effects of the Suez crisis.

Canada

Transactions with Canada during the second quarter were not materially different from those a year earlier, except for a substantially higher outflow of United States capital and a somewhat higher income on investments. Exports seem to have leveled off. During the second quarter they were about \$20 million higher than a year earlier, while during the first quarter the increase over the corresponding period a year ago was \$50 million. The same tendency may be noticed in imports. The capital outflow during the second quarter included financing for several major projects, including the production of aluminum, oil and gas pipelines, oil producing, and mining facilities.

Latin America

Payments by Latin America to the United States increased considerably more from the second quarter of 1956 to the corresponding period in 1957 than United States payments to Latin America, omitting the purchases of oil concessions from Venezuela. Imports of goods and services did not change from a year ago, and from countries other than Venezuela were \$70 million smaller. The outflow of United States capital through direct investments rose by about \$300 million of which about \$175 million may be accounted for by the purchases of new oil concessions. On the other hand, the

net outflow of short-term capital which continued through most of 1956 and the first months of 1957 stopped during the second quarter of this year.

United States exports of goods increased over the second quarter of 1956 by about \$220 million, and excluding Venezuela by about \$140 million. In addition, income from United States investments and other service transactions also increased. Besides Venezuela, which increased its dollar holdings during the second quarter by about \$400 million, there were also gains by Cuba, El Salvador, and Colombia, partly as a result of seasonal factors in their trade. However, Brazil, Mexico, and Argentina (omitting the funds obtained from the International Monetary Fund) had sizable losses. The losses by Mexico, which may have been in part seasonal, followed a long period of sharply rising reserves. The losses of Argentina and Brazil, however, further reduced the reserves which were already small in comparison to the trade of those countries.

Other countries

The balance of payments between the United States and the independent countries of Asia, Africa, and Oceania during the second quarter of 1957 resulted in net payments by the United States of about \$130 million. This was somewhat higher than during the first quarter when net payments were \$50 million. The change was due, however, largely to a rise in the outflow of short- and medium-term capital, a large part of which went to Japan. Compared with the second quarter of last year net payments had declined by about \$150 million.

The change from the second quarter of 1956 resulted from a rise in our exports, which was only partly offset by a higher outflow of private and Government capital and nonmilitary grants, while our imports remained virtually unchanged (omitting the repayment of silver which appears in the balance of payments as an import offset by a return flow of Government capital).

Much of the change in the balance in our transactions with this area may be attributed to Japan, which increased its dollar assets by about \$80 million during the second quarter of 1956 but lost about \$240 million during the corresponding period this year, in addition to the rise in its short-term debts.

Summary

The second quarter balance of payments was still—although to a diminishing extent—under the influence of the Suez crisis, and certain other temporary influences including exceptionally large shipments of cotton. It also reflected, however, a large rise in demand by many countries, particularly in Latin America and Asia, which exceeded their current foreign exchange income and led to sizable reductions in reserves. The rise in demand in many of these countries is associated with the rapid expansion in their economies partially financed through inflationary processes. The losses in their reserves indicate, however, that their current rate of purchases has to be curtailed, unless their foreign exchange receipts are substantially increased. Measures to curtail imports have already been taken by several countries, including France, Japan, and India. These measures may also be expected to affect our exports.

We may not, therefore, expect our foreign transactions to give the same stimulation to the domestic economy which they did earlier in the year. The fillip in our exports, and more importantly the larger picture of world wide political and economic developments of which these temporarily expanded sales were a manifestation, resulted in some weakening of the economic position of some of our important customers.

Monthly BUSINESS STATISTICS

THE STATISTICS here are a continuation of the data published in BUSINESS STATISTICS, the 1955 Statistical Supplement to the SURVEY OF CURRENT BUSINESS. That volume (price \$2.00) contains monthly data for the years 1951 through 1954 and monthly averages for earlier years back to 1929 insofar as available; it also provides a description of each series and references to sources of monthly figures prior to 1951. Series added or significantly revised since publication of the 1955 Supplement are indicated by an asterisk (*) and a dagger (†), respectively. Except as otherwise stated, the terms "unadjusted" and "adjusted" refer to adjustment for seasonal variation.

Statistics originating in Government agencies are not copyrighted and may be reprinted freely. Data from private sources are provided through the courtesy of the compilers, and are subject to their copyrights.

[Averages for the year 1955 are provided in the July 1956 issue of the SURVEY]

Unless otherwise stated, statistics through 1954 and descriptive notes are shown in the 1955 edition of BUSINESS STATISTICS	1956						1957

*Revised.

†Revised series. Estimates of national income and product and personal income have been further revised back to 1954 (all revisions—beginning with 1952—appear on pp. 5 ff. of the July 1957 issue of the SURVEY); for data prior to 1952, see the 1954 NATIONAL INCOME SUPPLEMENT or the 1955 edition of BUSINESS STATISTICS.

[§]Includes inventory valuation adjustment. [‡]Government sales are not deducted.

[§]Personal saving is excess of disposable income over personal consumption expenditures shown as a component of gross national product above.

Unless otherwise stated, statistics through 1954 and descriptive notes are shown in the 1955 edition of BUSINESS STATISTICS

[†] Revised. [‡] Preliminary.

[§] Estimates for the 3d and 4th quarters of 1957, based on anticipated capital expenditures of business, appear on p. 5 of this issue of the SURVEY.

[¶] Historical data (annual totals, 1939 and 1945-55; quarterly, unadj. and seasonally adj. at annual rates, 1947-55) appear on pp. 6 and 7 of the June 1956 SURVEY.

[‡] Includes data not shown separately.

[†] Revised series. Annual estimates for 1910-50 appear on p. 19 of the March 1957 SURVEY; estimates for 1951-56 have been further revised—revisions for 1954-56 are based largely on information provided by the 1954 Census of Agriculture. Monthly data for January-May 1956, together with a brief description of the current revision, appear in the July 1957 issue of the Farm Income Situation, No. 164; those for 1954 and 1955 are available upon request. Indexes of cash receipts and volume of marketings have been revised to reflect adoption of the 1947-49=100 base period; for the volume index, also wider coverage and use of new price weights. The revised indexes of volume of marketings (annuals, 1910-50; monthly, 1947-50) appear on p. 20 of the April SURVEY. Unpublished indexes of cash receipts and physical volume (January 1954-May 1956) are available upon request.

Unless otherwise stated, statistics through 1954 and descriptive notes are shown in the 1955 edition of BUSINESS STATISTICS

* Revised. † Preliminary. ‡ Scattered revisions for 1955 will be shown later.

§ The term "business" here includes only manufacturing and trade. Business inventories as shown on p. S-1 cover data for all types of producers, both farm and nonfarm. Unadjusted data for manufacturing are shown on p. S-4; those for retail and wholesale trade on pp. S-9, S-10, and S-11.

¶ Revised series. To incorporate adjustments to new benchmarks, new samples, or changes in classifications, data have been revised as follows: Manufacturing sales, inventories, and orders, back to January 1953 (see August 1957 *Industry Survey* for back data); wholesale trade sales and inventories, back to January 1948 (see p. 32 of the August 1957 *Survey* for back data); retail sales, back to January 1951 (see p. 28 of the June 1957 *Survey* for back data).

Unless otherwise stated, statistics through 1954 and descriptive notes are shown in the 1955 edition of BUSINESS STATISTICS

* Revised. ⊙ Revised series. See note marked "†" for p. S-3.
♀ Includes textiles, leather, paper, and printing and publishing industries; unfilled orders for other nondurable-goods industries are zero.
† For these industries (food, beverages, tobacco, apparel, petroleum, chemicals, and rubber), sales are considered equal to new orders.
♂ Data are from Dun and Bradstreet, Inc.
‡ Data beginning January 1954 have been revised to incorporate the latest revisions in the price series for individual commodities; unpublished revisions (prior to April 1956) will be shown later.
§ Includes sweetpotatoes and dry edible beans.
Ⓢ Ratio of prices received to prices paid (including interest, taxes, and wage rates).
† Parity ratio revised beginning March 1953; revisions prior to April 1956 will be shown later.

Unless otherwise stated, statistics through 1954 and descriptive notes are shown in the 1955 edition of BUSINESS STATISTICS	1956						1957

* Revised. † Preliminary.

† Indexes based on 1935-39=100 are as follows: Measured by—wholesale prices, 44.2 (August); consumer prices, 49.5 (July); retail food, 42.2 (July).

‡ Data include some contracts awarded in prior months but not reported.

§ Revisions prior to May 1956 will be shown later.

¶ Revised series, reflecting nationwide coverage and new techniques for compiling data on residential buildings. Figures for public and private ownership for August–December 1956 will be available later.

§ Data for August and November 1956 and January, May, and August 1957 are for 5 weeks; other months, 4 weeks.

¶ Data for August and October 1956 and January and May 1957 are for 5 weeks; other months, 4 weeks.

† Revised back to 1946 to incorporate new seasonal factors, revisions for 1946-53 and 1955-56 (1954 data have since been revised) are shown on p. 20 of the March 1957 SURVEY.

Unless otherwise stated, statistics through 1954 and descriptive notes are shown in the 1955 edition of BUSINESS STATISTICS	1956						1957

¹ Revised. ² Advance estimate. ³ Comparable data not available; series temporarily discontinued.

⁴ Revised series. Estimates of personal consumption expenditures have been further revised back to 1954 (all revisions—beginning with 1952—appear on pp. 5 ff. of the July 1957 SURVEY); for data prior to 1952, see the 1954 NATIONAL INCOME SUPPLEMENT.

⁵ Includes data not shown separately.

⁶ Data beginning January 1951 have been revised to exclude data for milk dealers' establishments with processing on the premises (now classified as manufacturing plants); data prior to April 1956 appear on p. 28 of the June 1957 SURVEY.

⁷ Correction: 1951 monthly average for combined department-store and mail-order sales (old series) shown in the 1955 edition of BUSINESS STATISTICS should read \$927,000,000.

Unless otherwise stated, statistics through 1954 and descriptive notes are shown in the 1955 edition of BUSINESS STATISTICS	1956						1957

♂ Revised. ♀ Preliminary. † Revised series; see p. 28 of the June 1957 SURVEY for details. Revisions for January-March 1956 will be shown later. ♀ Includes data not shown separately. ⊕ Revised beginning January 1956 to reflect change in previous classification of certain stores to department stores in accordance with 1954 Census of Business; unpublished revisions (January-May 1956) are available upon request.

♂ Data revised for period beginning January 1940; not comparable with former series. Unpublished revisions for accounts receivable (prior to October 1955), and for collection ratios (installment accounts) prior to January 1953, will be shown later.

† Data for 1946-55 have been revised to reflect current seasonal patterns and to allow for changes in the samples used in computing the unadjusted indexes. Revisions beginning with 1946 or total United States appear on p. 24 of the October 1955 SURVEY; unpublished revisions for the districts are available upon request.

Unless otherwise stated, statistics through 1954 and descriptive notes are shown in the 1955 edition of BUSINESS STATISTICS

† Revised. ‡ Preliminary. ¹ Net sales; not comparable with data through January 1957, which are gross. Comparable figure for August 1956 is \$87,162,000. ² See note marked "Q" for this page. ³ See corresponding note on p. S-10 for department-store stocks and note marked "†" on p. S-3 for wholesale trade. ⁴ Revised estimates for February 1953-December 1955 are available upon request. ⁵ Includes data for industries not shown.

Q Data beginning May 1956 are derived from an expanded sample of households; see the May 1957 SURVEY for overlap figures for May 1956. The estimates beginning January 1957 reflect certain changes in definitions for employment and unemployment as follows: Two small groups of persons formerly classified as employed are now classified as unemployed (except for the subgroup "in school and waiting to start new jobs" which is now counted as not in the labor force). Estimates for August 1957 on the old basis, comparable with data shown through 1956, in order as shown above (thous.): 120,713; 71,838; 68,999; 66,619; 6,827; 59,792; 2,380; 48,875. Data on the old basis for earlier months of 1957 are shown in previous issues of the SURVEY.

† Data beginning January 1955 for employment, hours, and earnings have been adjusted to the 1st quarter 1956 benchmark; revised data for January 1955-April 1956 may be obtained, within the next few months, upon request to the U. S. Department of Labor, Bureau of Labor Statistics, Division of Manpower and Employment Statistics.

*New series. Figures relate to establishments primarily engaged in local or long-distance trucking, transfer, and draying services or in the storage of farm products and other goods.

Unless otherwise stated, statistics through 1954 and descriptive notes are shown in the 1955 edition of BUSINESS STATISTICS	1956						1957

† Revised. * Preliminary. † Includes Post Office employees hired for Christmas season; there were about 284,000 such employees in continental U. S. in December 1956.

† See note marked "†" on p. S-11. ‡ Includes data for industries not shown.

* New series. Overtime hours (in excess of hours for either the straight-time workday or workweek) for which premiums were paid. Weekend and holiday hours are included only if premium wage rates were paid; hours for which only shift differential, hazard, incentive, or other types of premiums were paid are excluded. Data prior to January 1956 are not available.

EMPLOYMENT AND POPULATION—Continued

[†] Revised. [‡] Preliminary. [§] See note marked "§". [¶] See note marked "¶" on p. S-11.
[⌘] Includes data for industries not shown. ^{*} New series. See note on p. S-12.
[⌚] Data for the UCFE program are included in initial claims, beneficiaries, and benefit payments effective January 1955 and in insured unemployment effective March 1955.
[⌛] Beginning July 1956, figures include transitional claims which are excluded from earlier data. In June 1956, the number of transitional claims totaled 267.

Unless otherwise stated, statistics through 1954 and descriptive notes are shown in the 1955 edition of BUSINESS STATISTICS	1956						1957

* Revised. † Preliminary. ‡ See note marked "†" on p. S-11. § Includes data for industries not shown.

* New series. Excludes only overtime earnings paid at one and one-half times the straight-time rates for hours in excess of normally scheduled hours. No adjustment is made for other premium-payment provisions, e. g. holiday work, late-shift work, and overtime rates other than time and one-half. Data prior to 1955 will be shown later.

§ Rates as of September 1, 1957: Common labor, \$2.334; skilled labor, \$3.585.

Unless otherwise stated, statistics through 1954 and descriptive notes are shown in the 1955 edition of BUSINESS STATISTICS	1956						1957

* Revised. † Preliminary.

♂ Includes Boston, Philadelphia, Chicago, Detroit, San Francisco, and Los Angeles.

♀ Includes data not shown separately.

⊙ For demand deposits, the term "adjusted" denotes exclusion of interbank and U. S. Government deposits and of cash items reported as in process of collection; for loans, exclusion of loans to banks and deduction of valuation reserves (individual loan items are gross, i. e., before deduction of valuation reserves).

§ For bond yields, see p. S-20.

† Data are as of end of consecutive 4-week periods ending in month indicated.

‡ See corresponding note on p. S-17.

Unless otherwise stated, statistics through 1954 and descriptive notes are shown in the 1955 edition of BUSINESS STATISTICS	1956						1957

† Revised. ‡ Preliminary. § See note marked "†".

† Revised to adjust to new survey and census information. For credit outstanding, the revisions begin with 1948 (except data for consumer finance companies which are separately available from September 1950 only); for credit extensions and repayments, the revisions begin with 1940. See the October 1956 *Federal Reserve Bulletin* for all revisions prior to September 1955.

‡ Figures beginning with the 1st quarter of 1956 are not comparable with those through 1955. They are the revised series reflecting expanded coverage and new classification of agencies now reporting to the Treasury under Department Circular No. 966. Moreover, the 1956 and later data are not directly comparable from quarter to quarter, since activities covered vary; the June 1956 figures include data for certain agencies (with total assets of \$11,880 million) presently reporting only on an annual basis. The revised data cover the condition of public-enterprise and intragovernmental funds, certain other activities of the U. S. Government, and certain deposit and trust revolving funds. Interagency items are excluded except in the case of trust revolving funds.

Unless otherwise stated, statistics through 1954 and descriptive notes are shown in the 1955 edition of BUSINESS STATISTICS	1956						1957

Revised. † Preliminary.			157			35			149					

Revised. † Preliminary.
 Revisions for insurance written for January–August 1954 are shown in the November 1955 SURVEY. Revisions for silver production in Canada are shown as follows: January–July 1952 in the April 1956 SURVEY; January–September 1954, the December 1955 issue; January–December 1955, the March 1957 issue. ‡ Data for January 1956–April 1957 include revisions not distributed by areas. § Or increase in earmarked gold (—). ¶ Includes data not shown separately.

† The term "adjusted" denotes exclusion of interbank and U. S. Government deposits; for demand deposits, also exclusion of cash items reported as in process of collection.

‡ Includes Boston, Philadelphia, Chicago, Detroit, San Francisco, and Los Angeles.

§ Revisions beginning with 1943 appear on p. 24 of the October 1955 SURVEY.

¶ Data beginning with 1956 are based on a new sample.

Unless otherwise stated, statistics through 1954 and descriptive notes are shown in the 1955 edition of BUSINESS STATISTICS	1956						1957

† Revised. ⊙ Preliminary. † Revised indexes will be published later.

‡ Revisions for 1953, 1954, 1955 (1st quarter), and 1956 (1st quarter) for balance of payments and for January 1954-January 1956 for foreign trade will be shown later.

⊙ Adjusted for balance-of-payments purposes, mainly for valuation, coverage, and timing. ⊙ Excludes military expenditures.

Δ Excludes "special category" shipments and all commodities exported under foreign-aid programs as Department of Defense controlled cargo.

† Data include shipments (military and economic aid) under the Mutual Security Program. Total MSP military shipments (including, since early 1956, also "consumables and construction" shipments) are as follows (mil. dol.): July 1956-July 1957, respectively—350.6; 157.9; 107.1; 110.5; 119.8; 122.7; 97.1; 121.4; 129.4; 83.7; 102.2; 134.1; 186.8.

Δ Excludes "special category" shipments. ⊙ Includes countries not shown separately.

Unless otherwise stated, statistics through 1954 and descriptive notes are shown in the 1955 edition of BUSINESS STATISTICS	1956						1957

⊕ Revised.
§Beginning January 1955, data include local service operations of one carrier. ⊙ Revisions for January-December 1954 are available upon request.
¶Data beginning 1st quarter 1955 cover large motor carriers having annual operating revenues of \$1,000,000 or above.
⊕Beginning January 1956, data cover the revised I. C. C. list of class I railroads; i. e., carriers having annual operating revenues of \$3,000,000 or more (old basis, \$1,000,000 or more).
⊗Data for August, September, and December 1956 and March, June, and August 1957 are for 5 weeks; other months, 4 weeks. ♀ Includes data not shown separately.
‡Revision for June 1956, \$77,700,000.

Unless otherwise stated, statistics through 1954 and descriptive notes are shown in the 1955 edition of BUSINESS STATISTICS

♂ Revised. ♀ Preliminary.
⊕States represented are: North Carolina, South Carolina, Georgia, Florida, Alabama, Tennessee, Arkansas, Louisiana, Texas, Oklahoma. According to quarterly reports from Virginia, consumption in that State is as follows (thous. short tons): 1956—January–March, 270; April–June, 325; July–September, 76; October–December, 79; 1957—January–March, 277; April–June, 323.
♀The totals for fertilizer exports and imports include data not shown separately. Revisions for June 1955–January 1956 for all indicated items will be published later.
♂For data on lard, see p. S-29. Figures prior to 1955 for tallow (not shown in the 1955 BUSINESS STATISTICS) will appear later.
†Consumption figures for edible tallow exclude quantities used in refining; those for inedible tallow, etc., include such quantities.
‡Revisions for 1954 and 1955 (also for 1953 for cottonseed and products) will be shown later.
ΔBeginning 1955, data may include some refined oils (not formerly included); consumption figures exclude data for cod, cod-liver, and other liver oils, and stocks include only the quantities of these oils held by producing firms.

Unless otherwise stated, statistics through 1954 and descriptive notes are shown in the 1955 edition of BUSINESS STATISTICS	1956						1957

† Revised. ‡ Preliminary. 1 December 1 estimate of 1956 crop. 2 September 1 estimate of 1957 crop.

§ Old crop only; new grain not reported until beginning of new crop year (July for barley, oats, and wheat; October for corn).

|| Toledo included beginning with June 1955.

¶ Bags of 100 lb.

⌘ The total includes wheat owned by the Commodity Credit Corporation and stored off farms in its own steel and wooden bins; such data are not included in the breakdown of stocks.

⌘ Prior to the August 1956 SURVEY, data were reported in thousands of 60-lb. bushels.

Unless otherwise stated, statistics through 1954 and descriptive notes are shown in the 1955 edition of BUSINESS STATISTICS	1956						1957

♂ Revised. ♂ Preliminary.

† Beginning January 1957, figures exclude data for sausage and sausage-room products and edible offal; comparable figure for December 1956 is 606,000,000 lbs.

‡ Revisions for wheat flour production and wheat grindings (January 1954-July 1955) and for egg production (1950-55) will be shown later.

♂ Revisions for 1954 and 1955 appear in the November 1956 SURVEY.

Unless otherwise stated, statistics through 1954 and descriptive notes are shown in the 1955 edition of BUSINESS STATISTICS

^a Revised. ^b Preliminary. ^c Total for July-August.

^d Beginning 1956, data (compiled jointly by The American Iron Ore Association and American Iron and Steel Institute) reflect increased coverage of approximately 70 U. S. and Canadian furnaces. Also, some U. S. ore previously reported as held on Lake Erie docks is now included in stocks at furnace yards, and certain small stocks of ore, not fully reported in earlier data, are now more accurately represented. Comparable figures for earlier periods are not available. ^e Revisions for 1954 appear in the June 1956 Survey and for 1955 in the October 1956 issue, p. S-35 except that for 1955, exports of iron and steel products are further revised as follows (short tons): Total—May, 854,549; June, 879,842; September, 789,530; November, 815,810; scrap—May, 487,300; June, 545,812; November, 446,451.

^f For 1957, percent of capacity is calculated on annual capacity as of January 1, 1957, of 133,459,150 tons of steel; for 1956, data are based on capacity as of January 1, 1956 (128,363,090 tons).

NOTE FOR STEEL PRODUCTS, p. S-33.—Data for semifinished products comprise ingots, blooms, slabs, billets, etc., skelp, and wire rods (formerly included with wire and wire products); rails and accessories include wheels and axles. Monthly data for 1950-54 and annual shipments beginning 1933 on the revised basis will be shown later.

Unless otherwise stated, statistics through 1954 and descriptive notes are shown in the 1955 edition of BUSINESS STATISTICS	1956						1957

* Revised. † Preliminary. † Represents 5 weeks' production.
 † Beginning January 1956, data are estimated industry totals compiled by *Gas Appliance Manufacturers' Association* from reports of manufacturers whose shipments represent 80 to 9 percent of those for the industry. ‡ Comparable data back to 1945 are available upon request. § Differs from series shown in 1955 edition of *BUSINESS STATISTICS*.
 * New series. Data for trucks and tractors, compiled by the *Industrial Truck Association*, are available beginning January 1955. The refrigeration index, compiled by the *Board of Governors of the Federal Reserve System*, reflects changes in total output of refrigerators, freezers, room air conditioners, and dehumidifiers; data are available beginning January 1947.
 ‡ Data cover one additional company beginning July 1956 for pumps and beginning December 1956 for vulcanized fiber products. § [Unpublished revisions (January 1954–October 1955) reflecting adjustments to the 1954 Census of Manufactures, are available upon request. § Radio production comprises home, portable battery, automobile, and clock models; television set include combination models. Data for September and December 1956 and March and June 1957 cover 5 weeks, other months, 4 weeks. † Revisions for 1954 and 1955 are available upon request.
 ¶ Data for polyphase induction motors cover from 29 to 32 companies; for direct current motors and generators, from 21 to 25 companies. □ Data beginning January 1957 exclude sales of combination washer-dryer machines. In 1956, such sales totaled 102,400 units; 1957 cumulative sales through July were 101,000 units.

Unless otherwise stated, statistics through 1954 and descriptive notes are shown in the 1955 edition of BUSINESS STATISTICS

* Revised. * Preliminary.

♂ Revisions for July 1955 through January 1956 for imports and exports and for 1954 and 1955 for other indicated items will be published later.

† Revised (effective with the October 1955 SURVEY) to include bunker fuel.

♀ Includes nonmarketable catalyst coke.

Unless otherwise stated, statistics through 1954 and descriptive notes are shown in the 1955 edition of BUSINESS STATISTICS

$\varnothing$ Revised. $\varnothing$ Preliminary. $\varnothing$ Effective August 1956, for "solvent refined" instead of "conventional"; August 1956 price on former basis was unchanged from July 1956.
 $\varnothing$ Revisions for petroleum products (domestic demand, gasoline production, and natural gas liquids used in blends) for 1954, and 1955, and wood pulp (exports and imports) for January 1954-July 1955 will be published later.

*New series. Prior to 1954, included with data for gasoline, kerosene, and distillate fuel oil; for January-July 1954 figures, see note "1" on p. S-35 of the September 1955 SURVEY and earlier issues.

$\varnothing$ Asphalt—5.5 bbl.=1 short ton; wax—1 bbl.=280 lb.

$\varnothing$ Effective with the October 1955 SURVEY, data as compiled by the Bureau of the Census have been substituted for those from the United States P

† Revised. ‡ Preliminary.
† Effective with the October 1955 SURVEY, items have been revised as follows: Construction paper (formerly included in the total for paper) is now combined with construction board; wet-machine board was formerly included with paperboard.
‡ Data exclude estimates for "tissue paper".
§ Revisions for January-December 1954 appear in the March 1956 SURVEY.
¶ Revisions are as follows (units as above): October 1954, 417.8; May 1955, 447.9; June 1955, 449.8; October 1955, 453.7.
§ Revisions will be shown later as follows: January 1953-March 1956 for paperboard; January 1953-February 1956 for shipping containers; January 1955-March 1956 for folding paper boxes.

Unless otherwise stated, statistics through 1954 and descriptive notes are shown in the 1955 edition of BUSINESS STATISTICS	1956						1957

* Revised. ♀ Preliminary.

♂Data for 1954 for production, shipments, and stocks have been revised. Unpublished revisions (for January–May) are available upon request.

○Comprises sheathing, formboard, tile, and laminated board.

NOTE FOR MANMADE FIBERS AND MANUFACTURES, p. S-39.—Fiber production (representing complete industry coverage) is according to data compiled by *Textile Economics Bureau, Inc.*; the total includes production of textile glass fiber, not shown separately. Noncellulosic fibers cover types other than textile glass; they include acrylic, nylon (polyamide), polyester, saran, protein, and others.

Data for imports, exports, and for production of broad woven fabrics (industry totals) are compiled by *U. S. Department of Commerce, Bureau of the Census*. Manmade fabric production comprises, in addition to items shown separately, broad woven fabrics of 100-percent glass, of saran monofilament, acrylic, and polyester fibers, and of paper, etc. Silk fabric production comprises broad woven fabrics of 100-percent silk and of silk mixtures.

Statistics for 1955 are shown in the October 1956 SURVEY, p. S-38.

Unless otherwise stated, statistics through 1954 and descriptive notes are shown in the 1955 edition of BUSINESS STATISTICS	1956						1957

† Revised. ‡ Preliminary. § Data cover a 5-week period. ¶ Ginnings to December 13. †† Ginnings to January 16. ‡‡ Total ginnings of 1956 crop.
 § Data for September and November 1956 and January, April, and July 1957 cover 5-week periods (except data for men's apparel cuttings for January 1957 which cover 4 weeks) and for other months, 4 weeks; cotton stocks and number of active spindles are for end of period covered. ¶¶ Total ginnings to end of month indicated, except as noted. ††† Scattered revisions for 1954-1955 will be shown later.
 △ Effective August 1, 1956, middling 1" became the base quality for spot cotton quotations, replacing middling 1½". Comparable prices for 1", back to August 1951, are available upon request.
 ▽ The operation rate is calculated on a 5-day, 80-hour week without any adjustment for holidays. Current data are withheld pending a revision of the series.
 * New series. See descriptive note at bottom of p. S-38 for sources; data for 1955 are shown in the October 1956 SURVEY, p. S-38. † Includes data not shown separately.

Unless otherwise stated, statistics through 1954 and descriptive notes are shown in the 1955 edition of BUSINESS STATISTICS	1956						1957

¹ Revised. ² Preliminary. ³ Data cover a 5-week period. ⁴ Preliminary estimate of production. ⁵ Revisions for 2d quarter 1956 (thous. yds.): Total, 87,819; nonapparel, 2,672.

⁶ Data for September and November 1956 and January, April, and July 1957 cover 5-week periods; other months cover 4 weeks. Revisions for 1955 will be shown later.

⁷ Exports revised beginning January 1954 to include 2 types of aircraft formerly classified as "special category" and therefore excluded from the total.

⁸ Data for July-December 1956 are revised to exclude exports of "used" special-purpose vehicles; such types are included in data published previously for January-June 1956. Revisions (number): Total—October 1954, 22,216; 1955—January, 38,743; September, 23,190; October, 23,397; December, 38,728; trucks, etc., October 1954, 15,859; 1955—January, 17,073; September, 13,421; October, 14,542; December, 16,043.

⁹ Excludes railroad-owned private refrigerator cars. [○] Data beginning December 1955 reflect reclassification of reporting roads to revised ICC list of class I line-haul railroads; comparability with earlier data, based on ownership, is affected by less than 1 percent.

NOTE: Beginning with the October 1956 SURVEY, figures for shipments of industrial trucks and tractors will be found on p. S-34 in the Machinery and Apparatus Section.
