the BUSINESS SITUATION

In October, man-hours, personal income, and industrial production indicated some further slowdown in the rate of economic advance, but price pressures continued strong. The fragmentary evidence now available suggests that the expansion in GNP will slacken in the current quarter.

THE scattered evidence now available for the opening month of the fourth quarter appears to confirm some further weakening in the economy's forward momentum, even though price pressures continue to be severe. In October, the labor market continued to show signs of softening as employment recorded only a moderate increase, and weekly hours of work and overtime hours in manufacturing declined; unemployment remained virtually unchanged following its sharp rise in September. Personal income showed a very small increase and industrial production declined for the third consecutive month. According to advance reports, which have been subject to considerable revision, retail sales increased only moderately in October, partly because of some letup in sales of new cars.

The evidence now available is too fragmentary to permit definite conclusions about changes in business activity in the fourth quarter. However, with man-hours, personal income, and industrial production signaling less strength, and with important strikes exerting a dampening impact on economic activity, it is likely that the expansion in GNP will be less in the current quarter than in the third.

In the assessment of the outlook for final sales, consumer spending, which has behaved erratically over the past

year, is a notable uncertainty. Personal income and retail sales have started off at a rate only a little above the third quarter average. Auto demand is exhibiting less buoyancy, and reports on consumer buying intentions indicate some weakening in spending for the months ahead. These factors do not

suggest an acceleration in the rate of increase of consumption expenditures.

Fixed business investment may add less to final sales in the fourth than in the third quarter. According to the OBE-SEC survey conducted last August, capital outlays by business are not scheduled to increase. However, a new survey will appear next month. With stringent money and credit conditions continuing, residential investment is likely to decline further. Government purchases should add less to the fourth quarter than to the third quarter advance in GNP; the latter included the \$3 billion pay raise for Government employees. A quarterly interpolation of the Federal budget estimates suggests that a decline in defense expenditures will more than offset an increase in nondefense outlays. Data are not yet available to project State and local purchases or net exports, but the changes here are not likely to have an unusual impact on the overall rise in final sales. In contrast, inventory change, for which data are also lacking, may greatly affect the final outcome of fourth quarter GNP. Although inventories are always difficult to assess, from the present vantage point it seems more likely than not that inventories will contribute less to the increase in GNP in the current quarter than they did in the third.

Revised third quarter GNP

Revised estimates of GNP put the third quarter advance at a seasonally adjusted annual rate of \$18 billion, a slight upward revision from the preliminary figure published last month. Although the total was not altered significantly, there were some changes in its composition. Last month's prelim-

CHART 1 Nonfarm Employment

So far this year, the slower growth in nonfarm employment has been widespread

U.S. Department of Commerce, Office of Business Economics

69-11-1

inary estimates placed the third quarter increase in final sales at \$15 billion and the increase in the rate of inventory accumulation at $2\frac{1}{2}$ billion. According to the revised estimates, the rise in final sales has been lowered to about \$14 $\frac{1}{4}$ billion and the change in inventory investment increased to \$3 $\frac{3}{4}$ billion.

The third quarter increase in inventory accumulation compares with virtu-

ally no change in the second quarter and a decline of nearly \$4 billion in the first quarter of the year. Nearly all of the third quarter change in inventory accumulation was in durable goods, particularly at the retail level. As pointed out last month, the rise appears to be related to the current tapering in consumer durable goods spending.

The revision raised the increase in current dollar GNP fractionally, to an annual rate of 7 $\frac{1}{4}$ percent. As measured by the implicit deflator, prices rose 5 $\frac{1}{2}$ percent, and physical volume 2 $\frac{1}{4}$ percent—the latter a little more than the 2 percent rise indicated last month.

Easing in labor demand

Some letup in labor market pressures was confirmed last month as the unemployment rate, at 3.9 percent, remained essentially unchanged, following its sharp rise from 3.5 percent in August to 4.0 percent in September. Jobless rates remained at about their September levels for both Negroes and whites and for most major groups of workers, i.e., married men, adult men and women, and teenagers.

Growth in nonfarm employment continued to show signs of slowing in October (chart 1). Measured from the average employment level of the summer quarter, nonfarm industries added 260,000 workers to their payrolls. This compares with increases averaging 810,000 in the first, 570,000 in the second, and 375,000 in the third quarter of this year. Nearly all of the October employment advance centered in service industries and in wholesale and retail trade.

Average weekly hours of work for production and nonsupervisory workers, which had held steady at 37.8 hours from March through September, dropped to 37.5 hours last month. All the major industry groups except finance, insurance, and real estate recorded declines. In manufacturing industries, the average workweek fell from 40.8 to 40.5 hours, while overtime hours declined from 3.6 to 3.4 hours. Overtime in manufacturing also declined one-tenth of an hour in September.

Personal income rise slows

After recording gains averaging more than \$5 billion during the first 8 months of this year, the expansion in personal income slowed to \$3 $\frac{1}{4}$ billion in September (revised) and to \$2 $\frac{1}{2}$ billion in October. The slower expansion in personal income has centered in wage and salary disbursements, which rose only \$1 $\frac{1}{2}$ billion last month. Government payrolls advanced \$ $\frac{1}{2}$ billion, but private payrolls were up only \$1 billion.

Within the private sector, a good-sized gain of \$1 $\frac{1}{4}$ billion was recorded in the service industries. In the nonmanufacturing commodity-producing industries, wage and salary disbursements were up slightly, but this was offset in manufacturing industries where, as the result of a small decline in employment and a shorter workweek, payrolls recorded their first dip in 18 months. The distributive industries recorded their first decline this year. Wages and salaries fell by about \$ $\frac{1}{4}$ billion, as the employment gain was more than offset by reduced weekly hours of work.

Industrial output slips further

Industrial output declined for the third consecutive month in October. The Federal Reserve Index of industrial production fell to 173.3 (1957-59=100), down three-fourths of 1 percent from its July peak. Reductions in output were recorded in durable and nondurable goods manufacturing and in mining; these more than offset an increase in output by the utilities. In manufacturing, most of the decline was attributable to durables, where output was lower for motor vehicles, electrical machinery, instruments, and stone, clay, and glass products.

Recent changes in auto demand

Retail sales of new cars have shown considerable variation over the past 12 months. Having exceeded a seasonally adjusted annual rate of 10 million cars (both domestic and imports) for the first time in the third quarter of 1968, sales fell in each of the next two quarters to a rate of 9.4 million. They

CHART 2

Change in Nonfarm Business Inventories (GNP Basis)

Inventory accumulation increased in the third quarter with the rise mostly in durable goods

- Revised third quarter gain in GNP \$18 billion
- Nonfarm payroll employment rose moderately in October—weekly hours declined—unemployment rate virtually unchanged
- Wholesale prices up 0.4 percent in October—consumer prices scored another large increase in September

TOTAL PRODUCTION

THE LABOR MARKET

PRICES

* Seasonally Adjusted ** Seasonally Adjusted at Annual Rates
U.S. Department of Commerce, Office of Business Economics

- Personal income advanced \$2.4 billion in October, below third quarter gain
- Retail sales up a little in October—new car sales slipped below high September rate
- Private nonfarm housing starts increased to a rate of 1.5 million units in September

INCOME OF PERSONS

CONSUMPTION AND SAVING

FIXED INVESTMENT

* Seasonally Adjusted ** Seasonally Adjusted at Annual Rates
U.S. Department of Commerce, Office of Business Economics

- Manufacturing and trade inventories rose \$1 billion in September, the same as in August
- Merchandise trade balance of \$270 million in September was largest this year
- Third quarter balance of payments deficit (liquidity basis) \$2 ½ billion—an improvement from second quarter

INVENTORIES

FOREIGN TRANSACTIONS

GOVERNMENT

* Seasonally Adjusted ** Seasonally Adjusted at Annual Rates
U.S. Department of Commerce, Office of Business Economics

- Manufacturing capacity rate down slightly in third quarter
- Treasury bills little changed in October—yields on long-term corporate issues reached new highs
- Corporate profits (before tax and including IVA) dipped slightly in third quarter

HISTORICAL DATA

Historical national income and product data are available from the following sources:

1965-68: July 1969 SURVEY OF CURRENT BUSINESS.

1964: July 1968 SURVEY OF CURRENT BUSINESS.

1929-63: *The National Income and Product Accounts of the United States, 1929-65, Statistical Tables* (available from any U.S. Department of Commerce Field Office or from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402, price \$1.00 per copy).

then rose to 9.7 million in the second quarter and held at this rate in the third. Although sales of domestic and imported cars fell relatively the same amount in the 6 months ending last March, imports rose faster than domestics in the 6-month period ending in September. Imports accounted for over 11 percent of total sales in the recent June-September period, as compared with 10 percent a year earlier.

Sales of new domestic cars moved up sharply during the third quarter of this year, to reach a seasonally adjusted annual rate of almost 9½ million in September—the highest monthly figure in over 3 years. Although this rate was not sustained during October—partly due to strike-induced shortages of certain models—sales continued high and registered an annual rate of 8¼ million cars.

Producers started the 1970 model year at a high level of output. During the summer, assemblies were at a seasonally adjusted annual rate of 9 million units, as compared with 8 million in the second quarter. However, in the latter part of the third quarter and in October, strikes at several plants reduced production by about 100,000 units.

Price pressures continue strong

Inflationary pressures continued strong last month and the Wholesale Price Index recorded its sharpest rise since last June. After increasing 0.1 percent in July and August, and 0.2 percent in September, wholesale prices rose 0.4 percent in October. All of last month's increase centered in industrial commodities. Prices for farm products declined—for the fourth consecutive month—but this was offset by prices for processed foods and feeds, which were higher after declining in both August and September. Increases were widespread among the industrial commodities. An unusually sharp rise of 2.3 percent was recorded in transportation equipment prices, most of which occurred in the motor vehicle component.

Consumer prices rose about 0.5 percent in September (the latest month for which data are available); this was a little more than the rise in

August, but about the same as the average advance during the first 8 months of this year. Services and nondurable commodities accounted for all of the September increase. Most of the rise in nondurable commodities occurred in apparel, while the rise in food prices slowed noticeably.

Credit restraint severe

During October, the monetary authorities maintained very stringent conditions in money and credit markets. Continuing the pattern that has been evident since last July, most broad measures of monetary policy registered little change. Total member bank reserves, seasonally adjusted, dipped slightly last month, member bank borrowing increased, excess reserves declined, and net borrowed reserves averaged \$1 billion, up from \$830 million in September. The money stock (currency and private demand deposits)

rose slightly, and time deposits, reflecting the continued contraction in certificate of deposit funds, declined.

Commercial bank credit, seasonally adjusted, was unchanged in October. Bank loans, notably security loans, advanced at a more rapid pace than that which had prevailed since midyear, but larger declines were recorded in bank investments in U.S. Government and other securities.

After rising sharply in September, interest rates and bond yields responded favorably to renewed peace rumors and to expectations that a slowing in the pace of economic activity would permit some near-term letup in credit restraints. Interest rates declined during the first 3 weeks of October, but as optimism concerning lower rates faded, they turned about and moved upward during late October and early November. By mid-November, most interest rates and bond yields were very close to their levels at the end of September.

Corporate Profits, Internal Funds, and Investment

Preliminary figures for the third quarter show a sharp drop in corporate book profits from the second quarter, and a continuation of the decline in profits as measured for national income purposes. The latter decline, which started last fall, was reflected in a moderate reduction in internal sources of funds of non-financial corporations. Investment outlays of these corporations moved up in 1969, and the excess of fixed investment over internal funds has been high by historical standards.

CORPORATE profits as measured for national income purposes dipped \$½ billion from the second quarter to a total of \$88¼ billion at seasonally adjusted annual rates in the third. This profits measure—which is before-

tax and excludes inventory profits and losses—has declined steadily since the fourth quarter of 1968, and is now down \$2 billion, or 2 percent, from the peak attained in the summer quarter of 1968.

In the third quarter, the drop was confined to nonfinancial corporations, whose profits fell \$1 billion to a total of \$75½ billion; financial institutions' profits continued to rise and reached a total of over \$13 billion. Profits fell most in nondurable goods manufacturing, and were also off in the "all other industries" group. They were higher in durable goods manufacturing and in the transportation, communications, and public utility group.

This broad pattern of decline in nonfinancial corporation profits and strength in financial institution profits

was also evident earlier this year. However, in the first half of 1969, profits of durable goods manufacturers had declined and nondurable goods profits had advanced.

The decline shown by corporate profits (including the inventory valuation adjustment) over the past year was in marked contrast with the behavior of "book" profits, which continued to rise last fall and winter, were essentially unchanged in the second quarter, and then dropped sharply in the third. The different movement in the two profit measures reflected the fact that earlier this year book profits were inflated by an understatement of cost of goods sold. This stems from the use of first-in-first-out accounting in an environment of accelerating increases in prices of goods included in inventories, particularly raw materials. When the rate of advance in raw materials prices slowed in the third quarter, the understatement of costs was much reduced, and book profits

declined towards the level of corporate profits as measured for national income purposes.

The fall in book profits in the third quarter amounted to \$3 billion and brought the total down to \$92½ billion. Approximately \$1¼ billion of the third quarter drop in book profits was absorbed by lower income tax liabilities. With dividends rising about \$½ billion, book undistributed profits fell \$2½ billion.

Costs up sharply

The decline in the profits of nonfinancial corporations over the past year occurred despite an increase in sales. The reduction was entirely due to a narrowing of profit margins as unit labor and nonlabor costs rose faster than selling prices (chart 8). Since the third quarter 1968 peak in profits, prices per unit of constant-dollar gross corporate product increased 4 percent, unit labor costs rose more than 6 percent, and unit nonlabor costs were up 5 percent. In consequence, profits per unit of gross corporate output fell 6 percent over this period.

The narrowing of profit margins of nonfinancial corporations over the past year marked an intensification of the trend which began at the end of 1965 (chart 9). From the fourth quarter of that year to the third quarter of 1968, unit prices rose at an average annual rate of 2¼ percent, while unit labor costs were up 3½ percent and unit nonlabor costs rose 3¼ percent. The decline in unit profits during this period averaged 1¼ percent a year.

Before-tax profit margins, expressed as a percent of gross corporate product, fell from a peak of 17.3 percent in the fourth quarter of 1965 to 15.5 percent by the third quarter of 1968 and to 14 percent in the third quarter of this year.

The pressure on after-tax profit margins has been even more pronounced. The third quarter 1969 after-tax unit profit of 8.3 cents was 20 percent below the peak attained in late 1965, while before-tax unit profits were off only about 9 percent. The greater tax burden in 1969 as compared with 1965 reflected mainly the imposition of the surtax in 1968.

Investment exceeds internal funds

The internal funds of nonfinancial corporations fell almost \$1 billion over the past year, as a \$4 billion reduction in undistributed profits (including IVA) more than offset a \$3¼ billion increase in capital consumption allowances. Over the same period, corporate plant and equipment outlays moved up sharply,

CHART 8

Prices, Costs, and Profits Per Unit of Real Corporate Product

Prices rose sharply again in the third quarter . . .

as unit labor costs . . .

and nonlabor costs advanced

Unit profits declined

and, by the third quarter of 1969, such outlays were \$11 billion above the year earlier total. Reflecting these divergent movements, the ratio of internal sources to fixed investment outlays declined from 96½ percent in the third quarter of 1968 to 82 percent in the third quarter of this year. Most of this drop occurred in the first quarter.

Inventory and other working capital needs also moved up sharply over the past year. The conjunction of a rapid increase in investment and working capital needs and a modest decline in internal sources led corporations to increase their borrowing during the first half of 1969, and to reduce the rate at which they acquired liquid assets. The step-up in borrowing was centered in the shorter term categories: borrowing from banks and commercial paper. Bond flotations were up only moderately and mortgage borrowing declined.

The slowdown in total liquid asset acquisitions was accompanied by a large shift in the composition of liquid asset portfolios. There occurred a heavy liquidation of time deposits and a shift to open-market paper and short-term municipal obligations. These changes were made in large part in order to maximize yields.

Shares of Profits and Employee Compensation in Corporate Gross Product

- Since late 1965, profits have been declining relative to output while employee compensation has been increasing

Note on Revisions in the Sources and Uses of Funds, Nonfarm Nonfinancial Corporations

Revised statistics for the sources and uses of funds of nonfarm nonfinancial corporations may be found on pages 14 and 15; annual figures are shown from 1946 through 1968 and quarterly figures at seasonally adjusted annual rates from the first quarter of 1952 through the second quarter of 1969. These statistics reflect the comprehensive revisions in the sectoral allocation of investment and in the financial flow estimates introduced by the Board of Governors of the Federal Reserve System in the November 1969 *Federal Reserve Bulletin*. The revision also brings the estimates of purchases of physical assets and internal sources into line with the revised national income and product account data published in the July 1969 *SURVEY OF CURRENT BUSINESS*.

Input-Output Structure of the U.S. Economy: 1963

The results of the 1963 input-output study by OBE are published in this report. The outstanding feature of this second full-scale study by OBE of U.S. interindustry relationships is the greatly expanded industrial detail in which the data have been prepared—almost 370 industries as compared with 86 industries for the 1958 table. Because of space limitations and to provide comparable data, the 1963 industry categories in this article have been aggregated to the categories provided for 1958. Instructions for obtaining the full detail for 1963 appear on this page.

THE results of the Office of Business Economics' study of input-output relationships for 1963 are presented in this article. This study was conducted as part of OBE's continuing program for the development of input-output tables integrated with the national economic accounts.

The 1963 data were developed as part of the second full-scale input-output study by OBE, the first having covered the year 1958.¹ This article shows the 1963 estimates in the industry classification used for the 1958 table. However, the underlying detail has been greatly expanded. For 1963, estimates were prepared for about 370 separate industries, more than four times as many as in the 1958 study. The expansion in industry detail was strongly urged by a broad cross section

of users who were interested in pinpointing the industrial markets and repercussions of changes in these markets to a greater degree than was possible with the 1958 data.

A list showing the industry classifications used in the more detailed table appears on pages 26-29. The input-output data for these industries are shown in *Input-Output Structure of the U.S. Economy: 1963*; Volume 1, *Transactions Data for Detailed Industries*; Volume 2, *Direct Requirements for Detailed Industries*; and Volume 3, *Total Requirements for Detailed Industries*. These volumes may be purchased from the U.S. Government Printing Office, Washington, D.C. 20402.

With the completion of the 1963 input-output study, information on the technical structure of the Nation's industries is now available for 1963 as well as for 1947 and 1958. The 1947 table was originally prepared by the Bureau of Labor Statistics of the U.S. Department of Labor and was subsequently made consistent with the OBE

tables. The adjusted 1947 table may be obtained from OBE. The availability of comparable tables for a substantial span of time will greatly facilitate the investigation of changes in the technical structure of the U.S. economy.

Input-output and the national income and product account

The input-output tables are prepared as an integral part of the U.S. national economic accounts. The three charts on pages 17-19 show how the input-output account is related to the basic national income and product account.

The national income and product account is presented in chart 10. The output of the Nation is shown both in terms of final product flows and in terms of the income types generated in its production. The final product flows appear in the right-hand column of the chart. They consist of sales to consumers (personal consumption expenditures), sales to business on capital account and the change in business inventories (gross private domestic in-

Acknowledgments

A project of this magnitude requires the efforts of many individuals and organizations. The input-output tables were prepared under the supervision of Martin L. Marimont, Chief of the National Economics Division of the Office of Business Economics. Staff members of that Division who made important contributions were, in alphabetical order, E. Louise Adams, William A. Allen, Jr., Claiborne M. Ball, Carolyn G. Bernhard, Alberta R. Bonner, Joseph S. Cangialosi, Marjorie S. Crenshaw, M. Paula Cullen, John N. Dickie, William M. Eisenberg, Barbara G. Euell, D. Anne Fisher, Margaret P. Gorman, Jack J. Gottsegen, Marguerite F. Gramza, William Gullickson, Vesta C. Jones, Leo C. Maley, Jr., Sally R. Reed, Elizabeth G. Rhodes, Janet B. Riddle, Eugene P. Roberts, E. Lawrence Salkin, Roy A. Seaton, 2d, Nancy W. Simon, Brenda R. Stanley, Irving Stern, Joanne S. Thompson, Albert J. Walderhaug, and Lucy J. Wayne. Members of OBE's National Income Division also contributed to the study. The Farm Income Branch of the Department of Agriculture's Economic Research Service prepared the estimates for the agricultural industries, and the Division of Mineral Economics of the Bureau of Mines prepared the estimates for the mining industries. The study was financed in part by the Arms Control and Disarmament Agency, Economic Development Administration of the Department of Commerce, Office of Civilian Defense of the Department of Defense, Office of Emergency Preparedness, and the Office of Systems Requirements, Plans and Information of the Office of the Secretary of the Department of Transportation.

1. The 1958 table was updated to 1961 in *Input-Output Transactions: 1961*, Staff Working Paper in Economics and Statistics, No. 16, OBE, U.S. Department of Commerce, 1968. The following articles on the 1958 input-output study have appeared in the *SURVEY OF CURRENT BUSINESS*: Morris R. Goldman, Martin L. Marimont, and Beatrice N. Vaccara, *The Interindustry Structure of the United States*, November 1964; Norman Frumkin, *Construction Activity in the 1958 Input-Output Study*, May 1965; *The Transactions Table of the 1958 Input-Output Study and Revised Direct and Total Requirements Data*, September 1965; Nancy W. Simon, *Personal Consumption Expenditures in the 1958 Input-Output Study*, October 1965; *Additional Industry Detail for the 1958 Input-Output Study*, April 1966.

vestment), sales to government (government purchases of goods and services), and net sales to foreigners (net exports). The sum of these final product flows equals the gross national product (GNP). This same total can also be derived by summing the income types (referred to in the article as value added) shown in the left-hand column. These consist of employee compensation, proprietors' income, rental income, corporate profits, net interest, business transfer payments, indirect business taxes, current surplus of government enterprises less subsidies, and capital consumption allowances.

Chart 11 displays the same components of GNP as shown in chart 10, but they are rearranged in an input-output format—a matrix or a table containing data arranged in rows and columns. The row labeled “producers,” shows the sales of these producers to the same final markets which appear in the right-hand column of the first chart. The column headed “producers,” enumerates the income types which make up the gross national product—which are now grouped as payments to employees, to owners of business and capital, and to government. The sum of this column, like the sum of the row, is equal to the GNP.

The black box, which represents sales by producers to other producers of the goods and services used in production, is blank in chart 11. These producer-to-producer sales are already included in the value of the final products that add up to the total GNP. Accordingly, they are omitted to avoid duplication in the measurement of national output.

For input-output analysis, however, these sales by producers to producers must be separately measured because this analysis focuses on the way the industries of the Nation interact in producing the gross national product. These sales are revealed in chart 12, which is an extension of chart 11. Again, the sales by producers to the final markets are shown as well as income payments by producers. However, the previously empty black box has been expanded into a large shaded area with many boxes to display separately the industries producing (as well as consuming) raw materials,

semi-finished products, and intermediate services.

These industry-to-industry flows depict the input-output structure of the economy. For example, the manufacturing row shows the sales by manufacturing industries to each of their industrial customers as well as to the final markets; the column for manufacturing shows the industrial sources of the goods and services purchased by manufacturers for use in production, and also the value added by manufacturers.

Because the interindustry account is conceptually and statistically integrated with the national income and product account, the value of total GNP as well as of the flows to each of the final markets (personal consumption, gross private domestic investment, government purchases, and net exports) is the same in the two sets of accounts.² However, the breakdown of the flows differs in the two accounts. In the interindustry ac-

2. The GNP as now published in the national income and product account differs from the GNP as shown in the 1963 input-output table because it has not yet been revised to conform to the input-output calculations. The forthcoming benchmark revisions of the national income and product accounts, which will incorporate these calculations, may in turn result in some modifications of the input-output information presented in this article.

count, the final demand columns are classified by industry. For the national income account, other types of breakdown are shown.

Value added is shown component by component in the national income and product account. In the input-output table presented in this article the components are combined into “value added” totals. Although the sum of value added for all industries is identical in the two accounts, the industrial distribution of value added differs from that of the national income and product account. The components of value added and an explanation and reconciliation of the industrial differences will be included in a subsequent article.

Uses of input-output

Input-output analysis has a variety of applications including such diverse uses as evaluating the sales potential of an individual firm and probing the implications of broad economic programs.

The major contribution of input-output analysis is that it permits measurement of the industrial repercussion of changes in demand. The measurement of these repercussions can be illustrated by the following

CHART 10

THE GROSS NATIONAL PRODUCT

National Income and Product Account

1. Compensation of employees
2. Proprietors' income
3. Rental income of persons
4. Corporate profits and inventory valuation adjustment
5. Net interest
6. Business transfer payments
7. Indirect business tax and nontax liability
8. Less: Subsidies less current surplus of government enterprises
9. Capital consumption allowances

GROSS NATIONAL PRODUCT

10. Personal consumption expenditures
11. Gross private domestic investment
12. Net export of goods and services
13. Government purchases of goods and services

GROSS NATIONAL PRODUCT

example which deals with an increase in consumer demand for passenger cars. This increase in demand will lead in the first instance to an increase in the output of the automobile industry. However, there will be further impacts. The increase in the output of the automobile industry will result in more steel production, which in turn will require more chemicals, more iron ore, more limestone, and more coal. The automobile industry will also demand more upholstery fabrics, and the increased production of these fabrics will require more natural fibers, more synthetic fibers, and more plastics. There will be even further reactions; for instance, the production of synthetic fibers and other chemicals will lead to the production of more electricity and containers.

These are only a few of the industrial repercussions resulting from the initial change in consumer demand for automobiles. Input-output analysis traces this intricate chain reaction throughout the entire industrial structure and measures the effects of all the demands, both direct and indirect, on the output of each of the industries.

The industry outputs derived in this way can be used for estimating related industry requirements. For example, with supplementary data, the estimated output of each industry can be translated into requirements for employment or for additional plant and equipment.

Supplemented by information on the geographic distribution of industries, input-output analysis can also shed light on the regional implications of changes in the Nation's GNP.

Input-output is also useful in cost/price analysis. The input-output relationships shown in the table provide information on the cost/price structure of each industry and permit the measurement of the direct and indirect impact on all industries of changes in the prices occurring in any given industry.

Recognizing input-output's unique ability to account completely for the complex interaction among industries, many businesses have been guided in their decision-making by this type of analysis. For example, input-output has been used to evaluate market prospects for established products, to identify potential markets for new products, to spot prospective shortages in supplies, to add new dimensions and greater depth to the analysis of the economic

CHART 11

THE GROSS NATIONAL PRODUCT In Input-Output Format

GOVERNMENT	Indirect business taxes and current surplus of govt. enterprises, etc. items 7 & 8					
	Gross national product					

environment in which the firms can expect to operate, and to evaluate investment prospects in various industries.

Input-output has also been employed in the decision-making processes of Government agencies at every level. A notable Federal application has been in the study of the long-term growth of the economy and its implications for manpower requirements. Input-output has also been used to calculate the impact of U.S. exports and imports on employment in the various industries and

regions of the Nation. A number of State and local governments have sponsored the construction of input-output tables for use in evaluating the effects of different paths of economic development. Others have used input-output to study the industrial impact of alternative tax programs. In one State, input-output is the central element in a large scale system for forecasting the demographic and economic variables, as an aid in planning land use, expenditure and revenue programs, industrial

development, and so on.

Many regions throughout the Nation have been increasingly concerned about the adequacy of water resources. Input-output is being used as part of a total system to measure the industrial requirements for water. It is particularly helpful in identifying those activities that generate important demands for water not only as direct users but because their suppliers of materials, power, and other inputs also require water.

Producing Industries Ranked by Percent of Output Sold Directly to Final Demand, 1963

The use of statistical information in economic analysis generally requires reliance on quantitative relationships among economic variables. In the case of input-output, the most important of these relationships is the proportionality between total output of an industry and its input requirements. The use of proportional relationships is explained on pages 23-24 in connection with the discussion of tables 2 and 3.

Many of the users of input-output make the simplifying assumption that the proportions developed in the most recent table are applicable to other years and over a considerable range of output levels. While there are theoretical limitations to this assumption, it has generally yielded satisfactory results. However, where significant changes in the proportions do occur, they should be introduced. Information on the extent of the changes that have occurred—as shown by the input-output tables for 1947, 1958, and 1963—will be discussed in forthcoming OBE studies.

Description of the tables

The results of the 1963 input-output study are presented in three basic tables—the transactions or flow table, the direct requirements table, and the total requirements table. The discussion which follows provides a description of these tables and highlights some of the important interindustry relationships for 1963.³

The transactions (or flow) table (table 1). Table 1 shows the dollar value of the transactions among the various industries. Each row displays the distribution to each of the industries and final users of the output of goods and services of the industry. The columns show the value of each industry's consumption (input) of raw materials, semi-finished products and services, and its value added.

One interesting aspect of the sales pattern that is shown by table 1 is the wide variation in the proportion of output sold directly to the final markets by the various industries.

3. In the use of the information presented in these tables, it is important to keep in mind the definitions and conventions adopted for the 1963 input-output study. The most important of these are described briefly in the final section of this article.

Table A.—Total, Direct, and Indirect Output Attributable to Each Category of Final Demand, 1963

[Percent]

	Personal consumption expenditures			Gross private fixed capital formation			Net inventory change			Gross exports			Federal Government purchases ¹			State and local government purchases

*Less than \$500,000.

1. Includes insurance charges of \$11 million on personal consumption expenditures and \$1 million on gross private fixed capital formation.

NOTE.—Excludes industries where the value of sales in producers' and purchasers' prices are equal because there are no trade margins or transportation costs on these sales. Detail may not add to total due to rounding.

Some industries, such as footwear and other leather goods (34) and household furniture (22) sold over three-fourths of their total output to final markets and are, therefore, directly affected to a substantial degree, by changes in these markets. On the other hand, other industries such as agricultural services (4) and iron and ferro-alloy ores mining (5) sold virtually all of their output to intermediate consumers. For such industries the connection between production and final markets is remote and can be traced only through the sales of their customers. Of the 85 separate industries examined, 51 sold over half of their output to intermediate users; as many as 38 sold more than three-fourths of their output to such users. The wide range in the percentage of total output sold directly to final demand is shown in chart 13.

Table 1 also shows the diversity of the intermediate distribution patterns of industries. For example, the primary iron and steel manufacturing industry (37) and the metal container industry (39) both sold over 90 percent of their output to other industries. The former sold its output to 64 industries, none accounting for more than 20 percent of steel output. In contrast, the latter sold its output to 30 industries, one of which, food and kindred products (14), absorbed 65 percent of container output.

It is important to bear in mind that the output distributions shown in table 1 refer to 1963 and, therefore, reflect the demands, prices, and product mixture for that year. As these change over time, this output distribution pattern will also change.

Direct requirements table (table 2).

Table 2 relates each of the inputs of an industry to its total output. Each column shows the inputs that the industry named at the top of that column required from each of the industries named at the beginning of the rows to produce a dollar of its output.

Source: U.S. Department of Commerce, Office of Business Economics.

For example, to produce a dollar of output, the chemicals manufacturing industry (27) required 18 cents of its own production, 6 cents from the petroleum refining industry (31), 3 cents from the chemical mining industry (10), etc.

Table 2 shows the heavy interdependence among the industries which is a feature of the U.S. economy. Almost all industries required inputs from at least 30 others. As many as 57 industries required inputs from over 50 industries. The chemicals industry (27) for example, required inputs from 73 industries, only eight of which are producers of basic raw materials.

The data in table 2 permit the tracing of the interconnections among the various industries and final demand in a systematic way. For example, assume that the household furniture industry produces \$1 million of furniture for sale to consumers. By use of column 22 it can be established that the household furniture industry would require slightly under \$18,000 ($\$1,000,000 \times 0.01776$) from itself. Thus, industry 22 would have to produce a minimum of \$1,018,000. Continuing the calculation, this output would require almost \$54,000 ($\$1,018,000 \times 0.05265$) of fabrics from industry 16, a little over \$142,000 ($\$1,018,000 \times 0.13979$) of wood products from industry 20, and so on down the column.

The next calculation is that of the output required by each of the supplying industries to meet the requirement placed on it. For example, industry 22 has so far required \$54,000 of fabrics from industry 16. To meet this requirement, industry 16 requires an output of over \$18,000 ($\$54,000 \times 0.32652$) from itself, and for the resulting \$72,000 of output, almost \$6,000 ($\$72,000 \times 0.08305$) from industry 28.

This chain of calculations of output requirements which spread through the economy can be continued, and the total output required from each industry to produce \$1 million of household furniture for consumers can thus be derived. This is a very laborious and time-consuming procedure unless performed on an electronic computer. However, the total output required from each industry can be easily calculated using table 3 in which

the relationships shown in table 2 have been completely traced and summarized.

Total requirements table (table 3). Each column of table 3 shows the output required both directly and indirectly from the industry named at the beginning of each row for each dollar of deliveries to final demand by the industry named at the head of the column.⁴ The data in the table make it possible to calculate the impact on the various industries of the economy which result from stipulated changes in the final demand.

Although table 3 is more convenient for calculating total requirements, table 2 will sometimes be preferred, because it permits flexibility in the computation and modification of the relationships which are used. Also, table 2 is needed to split the total requirements, as given in table 3, into their direct and indirect components.

Returning to the household furniture example, it is possible to calculate the impacts quite simply, rather than laboriously tracing the impacts from industry to industry. Thus, the column for industry 22 shows that to provide final demand with an additional \$1 million of household furniture, \$1,019,000 ($\$1,000,000 \times 1.01889$) is required in total from industry 22, \$96,000 ($\$1,000,000 \times 0.09601$) from industry 16, almost \$209,000 ($\$1,000,000 \times 0.20882$) from industry 20, and so on.

As a further illustration of the link provided by input-output between final demand and the output of each industry, a series of calculations were performed using table 3. The results of these calculations appear in table A which shows the percentage of output of each industry attributable, directly or indirectly, to each category of final demand in 1963.

As may be seen from this table, the direct impact of a given category of final demand on an industry may be less important than its indirect effect. For example, while only 10 percent of the output of the paper industry (24) was sold to persons, 69 percent of its output was attributable to total con-

sumption by persons. The table also shows that although no investment goods are produced by the paper industry, almost 9 percent of its output was indirectly associated with fixed investment. Further, 9 percent of chemical mining (10) was exported directly, but 22 percent of its output was attributable to total exports.

The data in table A also show that most industries are heavily dependent on consumer expenditures. Of the 82 industries included in this table, 49 derive half or more of their output from consumer purchases. Another 13 derive more than half of their output from fixed investment, and only two derive more than half from Federal Government. The remaining 18 industries depend on more than one final demand category for the bulk of their output.

Supplementary data requirements

Before table 3 (or table 2) can be used to measure the impact of changes in the level and composition of GNP on each of the industries, a bill of goods must be formulated. A bill of goods is a set of final demands classified according to the industry categories of the table, expressed in 1963 prices, and valued at producers' prices. Furthermore, the trade margin on all items of the bill of goods is separately specified as a requirement from the trade industry. Similarly the transportation cost involved in the delivery to final markets of all items in the bill of goods is separately entered as a requirement from the transportation industry.

Some of the supplementary data useful in preparing bills of goods are presented in this article. Table 1 (see page 35) shows the industrial composition of each category of final demand in 1963. These data may be used to distribute by industry the value of each of the categories of final demand, if the value is available in the aggregate only. Table B presents industry sales to each category of final demand in purchasers' prices, and shows the trade margins and transportation costs included in these prices. This table should be used if the final demand to be analyzed is given in purchasers' prices and in the industrial classification of the input-output table. Similar data for the intermediate sales will appear in a future publication. In

4. The mathematical procedures for converting direct requirements to total requirements are described in *Inter-industry Economics*, Hollis B. Chenery and Paul G. Clark, John Wiley & Sons, 1959; *Input-Output and National Accounts*, Richard Stone, The Organization for European Economic Cooperation, 1961; and other similar texts.

addition, OBE will make available, upon request, data which can be used to translate estimates of personal consumption expenditures for each of the 12 major categories into the classification of the input-output table.

The price information required for input-output analysis is essentially the same that is used to convert current dollar GNP—by final demand category and by industry of origin—into constant dollar GNP. OBE plans to make this information available to users of input-output tables in as much detail as possible. The price information used to deflate GNP is derived largely from the Consumer Price Index and the Wholesale Price Index of the U.S. Department of Labor. This information can be used in input-output analysis to supplement the price data obtained from the GNP accounts.

Definitions and Conventions of the 1963 Input-Output Tables ⁵

Trade. The input-output tables do not trace actual flows to and from the trade industry. If trade were shown as buying and reselling, the detailed connections would be between trade and the producing industries, while the consuming industries and final users would make most of their purchases from a single source—trade. To show the links between producing and consuming industries or final markets, commodities are shown as if moving directly from producer to user, bypassing trade. Therefore, the output of trade is measured in terms of total margins—that is, operating expense plus profit.

Valuation of transactions. The valuation underlying the tables in this report is based on producers' prices.⁶ Such prices exclude the distribution costs which make up the difference between producers' and purchasers' prices. Under a system of producers' valuations, the individual inputs into a consuming industry are valued at producers' prices while the trade margin and transporta-

tion costs associated with all of these inputs appear as inputs to the consuming industry from the trade industry and transportation industry, respectively.

Classification of industries. For this article, all productive activities of the U.S. economy are grouped into 85 industries. Most of these are combinations of industries as defined in the Standard Industrial Classification (SIC) Manual, 1957 edition. Three are "dummy" industries established to simplify the estimating procedures. A list of the industrial categories and their composition in terms of the SIC is given on pages 26-29.

Secondary products or activities. In most cases, secondary products are treated as if sold by the producing industry to the primary industry and added to the output of the primary industry for distribution to users.⁷

In those industries in which secondary production is large and, at the same time, considerably different from the primary output, the secondary products, and their associated inputs, are subtracted from the producing industries and added to the primary industry.

Imports. Imports used for production (intermediate goods and services) which are substitutable for domestically produced goods and services⁸ are treated like secondary products; they are shown as if purchased by the industry producing the substitutable item and added to that industry's output.

Imports used in production which have no domestic counterparts, and imports purchased by final users in substantially the same form in which they were imported, are shown as purchased directly by the consuming industry or final market.

7. The basic unit of classification in the SIC is the establishment. An establishment is classified in an industry based on its principal activity. However, once an establishment is classified in an industry, its entire output, subsidiary as well as principal, is counted as part of the output of the industry. Its principal output, that which determines its industry classification, is called primary output; its other (subsidiary) output is called secondary.

8. Substitutability was determined on a judgmental basis using the following guide: the import should be interchangeable with a domestically produced item without any changes in the technology of the consuming industry or the resultant product.

Gross output and gross input. Gross output of an industry represents the sum of the values of the following elements: (a) the total production by the industry, including both primary and secondary products or services; (b) the producers' value of the secondary products or services of other industries which are primary to the given industry; and (c) the domestic port value of substitutable imports, which are distributed as part of the output of the given industry.

Gross input of an industry is equal to the sum of the values of the following elements: (a) total consumption of goods and services required for the industry's total production; (b) value added by the industry; (c) the producers' value of the secondary products or services of other industries which are primary to the given industry; and (d) the domestic port value of substitutable imports.⁹

Gross output, the row total, equals gross input, the column total.

Inventories. The inventory change shown for each industry represents the change in inventories of the industry's products regardless of which industry actually owns or holds the inventories. (This is different from the customary industry inventory figures which represent inventories held by each industry.) Inventories are so classified in the input-output table in order to provide the balance between the output of each industry and the total consumption of its products. Current production includes products which end up in inventories and are therefore not reflected in consumption. On the other hand, consumption may come from inventories of the producer, of the consumer, or of trade companies as well as from current output. To the extent it comes from inventories, it is not included in current production. Therefore, adding inventory increases of products of the industry to, and subtracting depletions from, the consumption of that industry's products achieves the balance with gross output of the industry.

9. Thus, secondary products and substitutable imports are added to both the inputs and outputs.

5. This section of the report is discussed much more fully in a document which is available upon request to the OBE.

6. Producers' prices have been defined to include Federal and State and local excise taxes collected and paid by the producer.

Industry Classification of the 1963 Input-Output Tables

The titles in bold face represent the groupings of industries used for the summary version of the 1963 tables and were also used in the 1958 and 1961 input-output tables prepared by the Office of Business Economics.

¹Less than \$500,000.

1. Entry in each column represents the sum of the value of transferred imports at domestic port value and the value of the secondary output of other industries which has been transferred to the industry named at the head of the column. See text for further discussion.

2. The detailed entries reflect gross exports of goods and services from each producing industry. Imports in total are shown as negative entries in this column on rows 80A and 80B. Therefore, the sum of the column equals the GNP component "net exports of goods and services."

Transactions, 1963

[In millions of dollars at producers' prices]

Food and kindred products	Tobacco manufactures	Bread and narrow fabrics, yarn and thread mills	Miscellaneous textile goods and floor coverings	Apparel	Miscellaneous fabricated textile products	Lumber and wood products, except containers	Wooden containers	Household furniture	Other furniture and fixtures	Paper and allied products, except containers	Paperboard containers and boxes	Printing and publishing	Chemicals and selected chemical products	Plastics and synthetic materials	Drugs, cleaning, and toilet preparations	Paints and allied products	Petroleum refining and related industries	Rubber and miscellaneous plastics products	Industry No.

Table 3.—Total Requirements (Direct and Indirect) Per

[Producers' prices]

Industry No.	Each entry represents the output required, directly and indirectly, from the industry named at the beginning of the row for each dollar of delivery to final demand by the industry named at the head of the column.	Livestock and live-stock products	Other agricultural products	Forestry and fishery products	Agricultural, forestry and fishery services	Iron and ferroalloy ores mining	Nonferrous metal ores mining	Coal mining	Crude petroleum and natural gas	Stone and clay mining and quarrying	Chemical and fertilizer mineral mining
		1	2	3	4	5	6	7	8	9	10

1. To remove a source of instability in the measurement of total requirements per dollar of delivery to final demand, the Commodity Credit Corporation has been excluded from this

industry. The excluded inputs to the CCC from the specified industries are: Industry 2, \$636 million; Industry 14, \$214 million; Industry 16, \$16 million; Industry 65, \$642 million; Industry 69, \$24 million; and value added, —\$1,531 million.

Table 3.—Total Requirements (Direct and Indirect) Per

Industry No.	Each entry represents the output required, directly and indirectly, from the industry named at the beginning of the row for each dollar of delivery to final demand by the industry named at the head of the column.	[Producers' prices]									
		Electric lighting and wiring equipment	Radio, television and communication equipment	Electronic components and accessories	Miscellaneous electrical machinery, equipment and supplies	Motor vehicles and equipment	Aircraft and parts	Other transportation equipment	Scientific and controlling instruments	Optical, ophthalmic and photographic equipment	Miscellaneous manufacturing

TAILORED

to help business . . .

BUSINESS SERVICE CHECKLIST

*A Weekly Guide to
U.S. Department of Commerce
Publications . . . plus Key
Business Indicators.*

Published weekly—

a 4 page, up-to-date listing of new Department of Commerce publications and other releases. Also shows key business indicator changes and trends. Tells how to order published materials of special interest to you.

BUSINESS SERVICE CHECKLIST

is tailored to help businessmen in all areas of economic activity.

Order subscriptions from:

Superintendent of Documents
Government Printing Office
Washington, D.C. 20402

or

Any U.S. Department of
Commerce Field Office

Annual subscription, \$2.50 (additional \$1.50 for foreign mailing).
Send check or money order payable to Superintendent of Documents.

CURRENT BUSINESS STATISTICS

THE STATISTICS here update series published in the 1967 edition of BUSINESS STATISTICS, biennial statistical supplement to the SURVEY OF CURRENT BUSINESS. That volume (price \$2.50) provides a description of each series, references to sources of earlier figures, and historical data as follows: For all series, monthly or quarterly, 1963 through 1966 (1956-66 for major quarterly series), annually, 1939-66; for selected series, monthly or quarterly, 1947-66 (where available). Series added or significantly revised after the 1967 BUSINESS STATISTICS went to press are indicated by an asterisk (*) and a dagger (†), respectively; certain revisions for 1966 issued too late for inclusion in the 1967 volume appear in the monthly SURVEY beginning with the September 1967 issue. Also, unless otherwise noted, revised monthly data for periods not shown herein corresponding to revised annual data are available upon request.

Statistics originating in Government agencies are not copyrighted and may be reprinted freely. Data from private sources are provided through the courtesy of the compilers, and are subject to their copyrights.

Unless otherwise stated, statistics through 1966 and descriptive notes are shown in the 1967 edition of BUSINESS STATISTICS	1966	1967	1968	1966		1967				1968				1969

† Revised. ‡ Preliminary.

1 Estimates for July-Sept. 1969 based on anticipated capital expenditures of business.

2 Estimates for Oct.-Dec. 1969 based on anticipated capital expenditures of business. Anticipated expenditures for the year 1969 are as follows (in bil. \$): All industries, 70.85; manufacturing, total, 29.68; durable goods industries, 15.43; nondurable goods industries, 14.25; mining, 1.56; railroad, 1.47; transportation, 4.52; public utilities, 12.74; communication, 7.55; commercial and other, 13.33. § Includes communication.

† See corresponding note on p. S-1. ‡ Includes inventory valuation adjustment.

§ Personal outlays comprise personal consumption expenditures, interest paid by consumers, and personal transfer payments to foreigners.

¶ Personal saving is excess of disposable income over personal outlays.

¶ Data for individual durable and nondurable goods industries components appear in the Mar., June, Sept., and Dec. issues of the SURVEY.

§ More complete details are given in the quarterly reviews in the Mar., June, Sept., and Dec. issues of the SURVEY. Revised data back to 1960 appear on p. 29 ff. of the June 1969 issue.

Unless otherwise stated, statistics through 1966 and descriptive notes are shown in the 1967 edition of BUSINESS STATISTICS	1966	1967	1968	1966	1967				1968				1969

¶ Revised. ¶ Preliminary. § See note marked "§" on p. S-2. † See corresponding note on p. S-1. ‡ Series revised beginning 1960 (Alaska and Hawaii are included in dollar figures beginning 1960 and in the indexes from 1966 only); available monthly data prior to May 1968 may be obtained from the U.S. Dept. of Agriculture, Economic Research Service.

§ Revisions for 1966 appear on p. 20 of the Nov. 1967 SURVEY; those for Jan.-Aug. 1967 will be shown later. ¶ Includes data for items not shown separately.

Unless otherwise stated, statistics through 1966 and descriptive notes are shown in the 1967 edition of BUSINESS STATISTICS	1967	1968	1968				1969

* Revised. † Preliminary. * New series. Monthly data for earlier years are available.
 † Effective with the Mar. 1969 SURVEY, labor force data reflect new seasonal factors; comparable data for earlier months appear in the Feb. and Mar. 1969 issues of Employment and Earnings (USDL, Bureau of Labor Statistics).

† Effective with the Sept. 1967 SURVEY, additional series (unemployment rates, seasonally adjusted production workers, hours, man-hours and man-hour indexes, private sector data, and spendable earnings) are shown; these are not in the 1967 edition of BUSINESS STATISTICS.

‡ Beginning in the July 1969 SURVEY, payroll employment and earnings data reflect adjustment to more recent benchmarks and updated seasonal factors; comparable earlier data, except man-hours and man-hour indexes, will appear in BLS Bulletin 1312-7, EMPLOYMENT AND EARNINGS, UNITED STATES, 1909-69, to be available soon from the Gov't. Printing Off., Wash., D.C. 20402. * Beginning Jan. 1969, federal employment includes about 39,000 civilian technicians of the National Guard who were transferred from State to federal status.

† See corresponding note, bottom of p. S-13. ¶ See corresponding note, bottom of p. S-13.
♂ Wages as of Nov. 1, 1969: Common, \$4.848; skilled, \$6.802.

Unless otherwise stated, statistics through 1966 and descriptive notes are shown in the 1967 edition of BUSINESS STATISTICS

* Revised. * Preliminary. ¹ Beginning Feb. 1969, data for indicated month exclude loans by Federal Intermediate Credit Banks outside the Farm Credit Adm. system now reported quarterly only. Δ Adjusted to new benchmarks and seasonal factors; see note "f," p. S-13. † Revised (back to 1960) to incorporate new seasonal factors; see note "f," p. S-15, Oct. 1969 SURVEY for data through May 1968 (revisions for June and July 1968, 197 and 204).

○ Insured unemployment as % of average covered employment in a 12-month period.

○ Total SMSA's include some cities and counties not designated as SMSA's.

† Includes Boston, Philadelphia, Chicago, Detroit, San Francisco-Oakland and Los Angeles-Long Beach. ‡ Includes data not shown separately.

Unless otherwise stated, statistics through 1966 and descriptive notes are shown in the 1967 edition of BUSINESS STATISTICS	1967	1968	1968				1969

* Revised. ♂ Beginning Jan. 1969, data cover shipments of silver ore, base bullion (incl. sweepings, waste, and scrap), and refined bullion, formerly excluded. The 1968 annuals, and monthly data beginning Jan. 1968, for total exports and imports only have been restated to

reflect the revised coverage. ♀ Number of stocks represents number currently used; the change in number does not affect continuity of the series. ♀ Includes data not shown separately.

Unless otherwise stated, statistics through 1966 and descriptive notes are shown in the 1967 edition of BUSINESS STATISTICS

* Revised. * Preliminary. 1 Number of carriers filing complete reports for the year.
 2 Preliminary estimate by Association of American Railroads. 3 Data cover 5 weeks;
 other months, 4 weeks. 4 Reflects adjustment for extraordinary items.
 5 Annual total reflects revisions not distributed to the monthly or quarterly data. 6 Effective Aug. 26, 1968, passports are issued for 5 years; no renewals are made.

7 Beginning with 1st quarter 1969 reporting period, motor carriers are designated class 1 if they have gross operating revenues of \$1 million or over, annually; prior to 1969, class 1 carriers were those having annual operating revenues of \$200,000 or over. 8 For 1st quarter 1968 comparable with data for 1st quarter 1969.

Unless otherwise stated, statistics through 1966 and descriptive notes are shown in the 1967 edition of BUSINESS STATISTICS

* Revised. * Corrected

1 Annual total reflects revisions not distributed to the monthly data.

2 Beginning Jan. 1969, data are for 38 markets; comparable Dec. 1968 receipts: Cattle and calves, 1,085; hogs 1,461; sheep and lambs, 213. 3 Beginning Jan. 1969, quotations are on carlot rather than l.c.l. basis as previously.

Unless otherwise stated, statistics through 1966 and descriptive notes are shown in the 1957 edition of BUSINESS STATISTICS

† Revised. * Preliminary.

1 Beginning January 1968, data are not comparable with those for early periods; prices are based on minimum 80 percent A quality (instead of 60-79.9 percent as formerly). 2 Annual total reflects revisions not distributed to the monthly data. 3 Less than 500 short tons. 4 Beginning July 1967, prices based on 1967 benchmark; 1967 average is for July-Dec. period. July 1967 price on old basis, \$0.631.

○ Cases of 30 dozen. ♀ Bags of 132.276 lb. \$ Monthly data reflect cumulative revisions for prior periods. † Includes data not shown separately; see also note "§". Δ For data on lard, see p. S-28. ⊕ Producers' and warehouse stocks. † Factory and warehouse stocks.

Unless otherwise stated, statistics through 1966 and descriptive notes are shown in the 1967 edition of BUSINESS STATISTICS	1967	1968	1968				1969

Revised. † Revised total; monthly revisions are not available. ‡ Total for 11 months.

§ Reported year-end stocks. See BUSINESS STATISTICS. ¶ For month shown. * Data cover

5 weeks; other periods, 4 weeks. † Excludes orders for motors 1-20 hp.; domestic sales of

this class in 1968 totaled \$108.6 mil.; Sept. 1969, \$10.0 mil. ‡ Effective 1st quarter 1967,

tractor shovel loaders include types not previously covered and off-highway wheel tractors

exclude types previously covered. § Data cover 6 weeks.

Effective with Apr. 1969 SURVEY, data revised back to Jan. 1966.

† Revised series. Monthly data for 1956-66 are on p. 35 ff. of the Mar. 1968 SURVEY.

‡ Revised to include combination washer-driers.

§ Radio production comprises table, portable battery, auto, and clock models; television sets cover monochrome and color units.

Unless otherwise stated, statistics through 1966 and descriptive notes are shown in the 1967 edition of BUSINESS STATISTICS	1967	1968	1968				1969

* Revised. † Beginning 1st quarter 1968, value of new orders and backlog refers to orders on a funded order basis for Government contracts and on binding legal documents (or equivalent) for commercial business. ‡ Preliminary estimate of production. § Annual total includes revisions not distributed by months. ¶ Includes delayed registrations for seven States. †† Beginning Jan. 1969, data exclude vehicles on runners and skis. ‡‡ Data for 1967-68 are understated by from 3 to 5 percent and are not strictly comparable with figures beginning 1969. §§ Omits data for 1 State. ¶¶ Preliminary; refers to domestic business only.

‡ Total includes backlog for nonrelated products and services and basic research. § Data include military-type planes shipped to foreign governments. ¶ New series; source, Bureau of the Census. Beginning in the July 1969 SURVEY, imports are restated to include duty-paid cars from Canada. † Courtesy of R. L. Polk & Co.; republication prohibited. ‡ Excludes railroad-owned private refrigerator cars and private line cars.

SECTIONS

General:

Business indicators.....	1-7
Commodity prices.....	7-9
Construction and real estate.....	9, 10
Domestic trade.....	10-12
Labor force, employment, and earnings.....	12-16
Finance.....	16-21
Foreign trade of the United States.....	21-23
Transportation and communications.....	23, 24

Industry:

Chemicals and allied products.....	24, 25
Electric power and gas.....	25, 26
Food and kindred products; tobacco.....	26-30
Leather and products.....	30
Lumber and products.....	31
Metals and manufactures.....	31-34
Petroleum, coal, and products.....	34, 36
Pulp, paper, and paper products.....	36, 37
Rubber and rubber products.....	37
Stone, clay, and glass products.....	38
Textile products.....	38-40
Transportation equipment.....	40

INDIVIDUAL SERIES

Advertising.....	10, 11, 16
Aerospace vehicles.....	40

BUSINESS STATISTICS 1967 Biennial Edition

THE SIXTEENTH VOLUME in a series of statistical supplements to the monthly **SURVEY OF CURRENT BUSINESS**, the new edition provides, for the past quarter century, historical data for more than 2,500 series.

For most series, annual data are presented back to 1939. Quarterly statistics back to 1956 are shown for those series ordinarily published on a quarterly basis, and monthly data back to 1963 are given for monthly series. Also included in this volume is an appendix providing monthly or quarterly data back to 1947 for 350 of the more important economic series. Color keyed explanatory notes to the time series define terms, give sources of data, and describe the methods of compilation used.

Price, \$2.50. *Orders may be placed with the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402, or with any Field Office of the*

U.S. DEPARTMENT OF COMMERCE
